

DIN EN ISO 25745-2:2015-10 (E)

Energy performance of lifts, escalators and moving walks - Part 2: Energy calculation and classification for lifts (elevators) (ISO 25745-2:2015)

Contents	Page
Foreword	3
Introduction	4
1 Scope	5
2 Normative references	5
3 Terms, definitions	6
4 Data collection and analysis tools	6
5 Calculation of energy consumption	7
5.1 Methodology	7
5.2 Calculation of running energy per day	7
5.2.1 Usage and number of starts per day	7
5.2.2 Average travel distance	8
5.2.3 Average running energy per metre	8
5.2.4 Start/stop energy consumption	8
5.2.5 Running energy of an average cycle with empty car	9
5.2.6 Daily running energy	9
5.3 Calculation of non-running (idle/standby) energy consumption per day	10
5.3.1 Running time per day	10
5.3.2 Non-running time per day	11
5.3.3 Time ratios of idle/standby modes	11
5.3.4 Daily non-running (idle/standby) energy consumption	12
5.4 Total energy consumption per day	12
5.5 Total energy consumption per year	12
5.6 Method for determining the daily energy consumption for energy storage systems	12
6 Lift energy efficiency classification	13
6.1 Rationale	13
6.2 Performance level for running	13
6.3 Performance levels for idle/standby	14
6.4 Classification of energy performance of the lift	14
7 Specific running energy for the reference cycle	15
8 Reporting	15
Annex A (informative) Specific usage category	17
Annex B (informative) Example calculation	18
Annex C (informative) Symbols	20
Bibliography	22
