Vacuum technology - Vacuum gauges - Characterization of quadrupole mass spectrometers for partial pressure measurement

Contents	Page
Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	2
3 Terms and definitions	2
4 Symbols and abbreviated terms	3
5 Parameters for which characterization is required or recommended for the different applications	4
5.1 General	4
5.2 General characterization of the QMS	5
5.3 Leak rate measurement and leak rate monitoring (helium leak)	5
5.4 Leak rate monitoring (air leak)	5
5.5 Leak rate monitoring (water leak)	6
5.6 Residual gas analysis	6
5.7 Outgassing rate measurement	7
6 Vacuum systems to characterize QMS	7
6.1 General	7
6.2 Vacuum system for characterization with single gas	8
6.2.1 Continuous expansion system (orifice flow system)	8
6.2.2 Calibration system according to ISO 3567:2012	8
6.2.3 In situ calibration system	8
6.3 Vacuum system for characterization with gas mixtures	9
6.3.1 Continuous expansion system (orifice flow system)	9
6.3.2 In situ calibration system for gas mixture	10
7 Characterization and calibration procedures	10
7.1 General	10
7.2 Mass resolution	11
7.3 Minimum detectable partial pressure (pMDPP)	12
7.4 Minimum detectable concentration (CMDC)	13
7.5 Dynamic range	13
7.6 Sensitivity and interference effect ratio	14
7.7 Linear response range	15
7.8 Relative sensitivity factor	15
7.9 Fragmentation pattern (cracking pattern)	16
7.10 Outgassing rate of QMS	16
7.11 Pumping speed of QMS	17
8 Measurement uncertainties	17
8.1 General	17
8.2 Uncertainty of mass resolution	18
8.3 Uncertainty of pMDPP	18
8.4 Uncertainty of minimum detectable concentration (CMDC)	18
8.5 Uncertainty of dynamic range	18

8.6	Uncertainty of sensitivity	18
8.7	Uncertainty of linear response range	18
8.8	Uncertainty of relative sensitivity factor	18
8.9	Uncertainty of fragmentation factor	18
8.10	Uncertainties of outgassing rate and pumping speed	19
8.11	Long-term stability of characteristic parameters of QMS	19
9	Reporting results	19
Annex A (informative) Estimate of gas composition in the measurement chamber from known gas composition in the reservoir in front of a leak element under different flowconditions		21
Bibliography		23
