ISO 10300-3:2023-08 (E)

Calculation of load capacity of bevel gears - Part 3: Calculation of tooth root strength

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Symbols, general subscripts and abbreviated terms 2

5 General rating procedure 6

6 Gear tooth rating formulae -- Method B1 7
6.1 Tooth root stress formula 7
6.2 Permissible tooth root stress 8
6.3 Calculated safety factor 9
6.4 Tooth root stress factors 9
6.4.1 Tooth form factor, YFa 9
6.4.2 Stress correction factor for load at tooth tip, YSa 14
6.4.3 Contact ratio factor, Y 14
6.4.4 Bevel spiral angle factor, YBS 15
6.4.5 Load sharing factor, YLS 16
6.5 Permissible tooth root stress factors 16
6.5.1 Relative surface condition factor, YR,relT-B1 16
6.5.2 Relative notch sensitivity factor, Y,relT-B1 17

7 Gear tooth rating formulae -- Method B2 19
7.1 Tooth root stress formula 19
7.2 Permissible tooth root stress 19
7.3 Calculated safety factor 20
7.4 Tooth root stress factors 20
7.4.1 General 20
7.4.2 Stress parabola according to Lewis 21
7.4.3 Basic formula of geometry factor, YJ 21
7.4.4 Geometry factor, YJ, for bevel gears (for hypoid gears, see 7.4.5) 22
7.4.5 Geometry factor, YJ, for hypoid gears 26
7.4.6 Additional tooth strength parameters (for bevel and hypoid gears) 35
7.4.7 Root stress adjustment factor, YA 38
7.5 Permissible tooth root stress factors 38
7.5.1 Relative surface condition factor, YR,relT-B2 38
7.5.2 Relative notch sensitivity factor, Y,relT-B2 38

8 Factors for permissible tooth root stress common for method B1 and method B2 39
8.1 Size factor, YX 39
8.1.1 General 39
8.1.2 Structural and through hardened steels, spheroidal cast iron, perlitic malleable cast iron 39
8.1.3 Case, flame, induction hardened steels, nitrided or nitro carburized steels 39
8.1.4 Grey cast iron and spheroidal cast iron (ferrit structure) 39
8.2 Life factor, YNT 39

8.2.1 General 39
8.2.2 Method A 40
8.2.3 Method B 40

Bibliography 43
