IEC 61400-4:2025-04 (E)

Wind energy generation systems - Part 4: Design requirements for wind turbine gearboxes

Contents

Page

FOREWORD 6
INTRODUCTION 8
1 Scope 9
2 Normative references 10
3 Terms, definitions, abbreviated terms, units and conventions 13
3.1 Terms and definitions 13
3.2 Abbreviated terms and units 15
3.3 Conventions 18
3.3.1 Shaft designations – examples for typical wind turbine gearbox architecture 18
4 Design process 20
4.1 General 20
4.2 Gearbox type 21
4.3 Design life, service life, and reliability 22
4.4 Component class and consequence of failure 22
4.5 Design process 22
5 Gearbox interfaces and loads 25
5.1 General 25
5.2 Interfaces 25
5.3 Loads 25
5.4 Drivetrain dynamics 26
5.4.1 General 26
5.4.2 Model requirements 26
5.4.3 Required analyses 27
5.4.4 Evaluation of excitability 28
5.4.5 Verification of dynamic behaviour in system environment 28
6 Design and rating requirements 29
6.1 Gears 29
6.1.1 Reliability considerations 29
6.1.2 Calculation of gear load capacity 29
6.1.3 Load factors 33
6.1.4 Materials 35
6.1.5 Accuracy 35
6.1.6 Manufacturing 35
6.2 Rolling bearings 36
6.2.1 Reliability considerations 36
6.2.2 Bearing selection 39
6.2.3 Materials 40
6.2.4 Interface requirements 40
6.2.5 Design considerations 41
6.2.6 Bearing lubrication 43
6.2.7 Rating calculations 44

6.3 Plain bearings 47
6.3.1 Reliability considerations 47
6.3.2 Design load cases and associated risks 47
6.3.3 Interface requirements 49
6.3.4 Shaft and housing fits 50
6.3.5 Hydrodynamic lubrication regime 50
6.3.6 Lubricant regime analysis 51
6.3.7 Bearing requirements 51
6.4 Shafts, keys, housing joints, splines, and fasteners 52
6.4.1 Shafts 52
6.4.2 Shaft-hub connections 53
6.4.3 Shaft seals 53
6.4.4 Fasteners 53
6.4.5 Bolted joints 54
6.4.6 Circlips 55
6.5 Structural elements 55
6.5.1 General 55
6.5.2 Interfaces, boundary conditions, and loads 56
6.6 Lubrication 56
6.6.1 General 56
6.6.2 Lubricant performance characteristics 56
6.6.3 Lubricant viscosity 56
6.6.4 Method of lubrication and cooling 57
6.6.5 Quantity of lubricant in the lubrication system 57
6.6.6 Operating temperatures 58
6.6.7 Temperature control 58
6.6.8 Lubricant condition monitoring 59
6.6.9 Lubricant filtration 59
6.6.10 Ports 60
6.6.11 Lubricant level indicator 60
6.6.12 Magnetic plugs 60
6.6.13 Breather port 60
6.6.14 Flow sensor 61
7 Design verification and design validation 61
7.1 General 61
7.2 Design verification and validation plan 61
7.3 Failure mode categorization 61
7.4 Verification methods 62
7.4.1 General 62
7.4.2 Testing 62
7.4.3 Similarity 64
7.4.4 Simulation 65
7.5 Verification and validation matrix 65
8 Manufacturing and quality assurance 69
8.1 General 69
8.2 Quality plan 69
8.2.1 General 69
8.2.2 Surface temper inspection of gears after grinding 69
8.2.3 Surface roughness inspection 69
8.3 Critical processes 69
8.4 Statistical process control 69
8.5 Factory acceptance testing 70
8.5.1 Test objectives 70

8.5.2 Acceptance test plan 70
8.5.3 Factory test sequences 70
8.5.4 Acceptance measurements 71
8.6 Non-conforming components 71
8.6.1 General 71
8.6.2 Grinding notches 72
9 Design for service and operation 72
9.1 General 72
9.2 Service and operation design requirements 72
9.3 Service and operation documentation requirements 72
9.4 Safety 73
Annex A (informative) Examples of drivetrain interfaces and loads specifications 74
A.1 General 74
A.2 Common wind turbine drivetrain architectures 74
A.2.1 Non-integrated drivetrain with 4-point suspension 74
A.2.2 Non-integrated drivetrain with 3-point suspension 75
A.2.3 Integrated drivetrain 75
A.2.4 Interfaces 78
A.2.5 Coordinate system 78
A.2.6 Interface descriptions 78
A.2.7 Engineering data at the interface 80
A.3 Wind turbine load descriptions 80
A.3.1 Load description formats 80
A.3.2 Rainflow matrices 81
A.3.3 Load revolution distribution 82
A.3.4 Extreme load descriptions 83
A.4 Wind turbine reference power and speed 84
A.4.1 General 84
A.4.2 Wind turbine power control theory 84
A.4.3 Practicalities of power control 85
Annex B (informative) Dynamic gearbox model verification and validation 87
B.1 General 87
B.2 Verification of drivetrain dynamics models 87
B.3 Validation of drivetrain dynamics models 87
Bibliography 90

Figure 1 – Shaft designation in 3-stage parallel shaft gearboxes 19
Figure 2 – Shaft designation in 3-stage gearboxes with one planet stage 19
Figure 3 – Shaft designation in 3-stage gearboxes with two planet stages 20
Figure 4 – Shaft designation in 4-stage gearboxes with three planet stages 20
