Wind energy generation systems - Part 4: Design requirements for wind turbine gearboxes

Contents	Page
FOREWORD	6
INTRODUCTION	8
1 Scope	9
2 Normative references	10
3 Terms, definitions, abbreviated terms, units and conventions	13
3.1 Terms and definitions	13
3.2 Abbreviated terms and units	15
3.3 Conventions	18
3.3.1 Shaft designations – examples for typical wind turbine gearbox architecture	18
4 Design process	20
4.1 General	20
4.2 Gearbox type	21
4.3 Design life, service life, and reliability	22
4.4 Component class and consequence of failure	22
4.5 Design process	22
5 Gearbox interfaces and loads	25
5.1 General	25
5.2 Interfaces	25
5.3 Loads	25
5.4 Drivetrain dynamics	26
5.4.1 General	26
5.4.2 Model requirements	26
5.4.3 Required analyses	27
5.4.4 Evaluation of excitability	28
5.4.5 Verification of dynamic behaviour in system environment	28
6 Design and rating requirements	29
6.1 Gears	29
6.1.1 Reliability considerations	29
6.1.2 Calculation of gear load capacity	29
6.1.3 Load factors	33
6.1.4 Materials	35
6.1.5 Accuracy	35
6.1.6 Manufacturing	35
6.2 Rolling bearings	36
6.2.1 Reliability considerations	36
6.2.2 Bearing selection	39
6.2.3 Materials	40
6.2.4 Interface requirements	40
6.2.5 Design considerations	41
6.2.6 Bearing lubrication	43
6.2.7 Rating calculations	44

6.3	Plain bearings	47
6.3.1	Reliability considerations	47
6.3.2	Design load cases and associated risks	47
6.3.3	Interface requirements	49
6.3.4	Shaft and housing fits	50
6.3.5	Hydrodynamic lubrication regime	50
6.3.6	Lubricant regime analysis	51
6.3.7	Bearing requirements	51
6.4	Shafts, keys, housing joints, splines, and fasteners	52
6.4.1	Shafts	52
6.4.2	Shaft-hub connections	53
6.4.3	Shaft seals	53
6.4.4	Fasteners	53
6.4.5	Bolted joints	54
6.4.6	Circlips	55
6.5	Structural elements	55
6.5.1	General	55
6.5.2	Interfaces, boundary conditions, and loads	56
6.6	Lubrication	56
6.6.1	General	56
6.6.2	Lubricant performance characteristics	56
6.6.3	Lubricant viscosity	56
6.6.4	Method of lubrication and cooling	57
6.6.5	Quantity of lubricant in the lubrication system	57
6.6.6	Operating temperatures	58
6.6.7	Temperature control	58
6.6.8	Lubricant condition monitoring	59
6.6.9	Lubricant filtration	59
6.6.10	Ports	60
6.6.11	Lubricant level indicator	60
6.6.12	Magnetic plugs	60
6.6.13	Breather port	60
6.6.14	Flow sensor	61
7	Design verification and design validation	61
7.1	General	61
7.2	Design verification and validation plan	61
7.3	Failure mode categorization	61
7.4	Verification methods	62
7.4.1	General	62
7.4.2	Testing	62
7.4.3	Similarity	64
7.4.4	Simulation	65
7.5	Verification and validation matrix	65
8	Manufacturing and quality assurance	69
8.1	General	69
8.2	Quality plan	69
8.2.1	General	69
8.2.2	Surface temper inspection of gears after grinding	69
8.2.3	Surface roughness inspection	69
8.3	Critical processes	69
8.4	Statistical process control	69
8.5	Factory acceptance testing	70
8.5.1	Test objectives	70

8.5.2	Acceptance test plan	70
8.5.3	Factory test sequences.....	70
8.5.4	Acceptance measurements.....	71
8.6	Non-conforming components.....	71
8.6.1	General	71
8.6.2	Grinding notches	72
9	Design for service and operation	72
9.1	General.....	72
9.2	Service and operation design requirements.....	72
9.3	Service and operation documentation requirements	72
9.4	Safety	73
Annex A (informative)	Examples of drivetrain interfaces and loads specifications	74
A.1	General.....	74
A.2	Common wind turbine drivetrain architectures.....	74
A.2.1	Non-integrated drivetrain with 4-point suspension.....	74
A.2.2	Non-integrated drivetrain with 3-point suspension.....	75
A.2.3	Integrated drivetrain	75
A.2.4	Interfaces	78
A.2.5	Coordinate system.....	78
A.2.6	Interface descriptions	78
A.2.7	Engineering data at the interface	80
A.3	Wind turbine load descriptions	80
A.3.1	Load description formats	80
A.3.2	Rainflow matrices	81
A.3.3	Load revolution distribution.....	82
A.3.4	Extreme load descriptions.....	83
A.4	Wind turbine reference power and speed	84
A.4.1	General	84
A.4.2	Wind turbine power control theory	84
A.4.3	Practicalities of power control	85
Annex B (informative)	Dynamic gearbox model verification and validation.....	87
B.1	General.....	87
B.2	Verification of drivetrain dynamics models	87
B.3	Validation of drivetrain dynamics models	87
	Bibliography.....	90
	Figure 1 – Shaft designation in 3-stage parallel shaft gearboxes.....	19
	Figure 2 – Shaft designation in 3-stage gearboxes with one planet stage.....	19
	Figure 3 – Shaft designation in 3-stage gearboxes with two planet stages	20
	Figure 4 – Shaft designation in 4-stage gearboxes with three planet stages.....	20
	Figure 5 – Design process flow chart	23
	Figure 6 – Definition of planet gear rim thickness.....	31
	Figure 7 – Examples of bearing selection criteria	39
	Figure 8 – Notional operational conditions and plain bearing risk regions.....	49
	Figure A.1 – Non-integrated drivetrain with 4-point suspension.....	74
