## Data quality - Part 220: Sensor data: Quality measurement

---

| <b>Contents</b>       |                                              | <b>Page</b> |
|-----------------------|----------------------------------------------|-------------|
| Foreword .....        |                                              | iv          |
| Introduction .....    |                                              | v           |
| 1                     | Scope .....                                  | 1           |
| 2                     | Normative references .....                   | 1           |
| 3                     | Terms and definitions .....                  | 1           |
| 4                     | Fundamental principles and assumptions ..... | 1           |
| 5                     | Quality measures for sensor data .....       | 2           |
| 5.1                   | General .....                                | 2           |
| 5.2                   | Quality measures for accuracy .....          | 3           |
| 5.3                   | Quality measures for completeness .....      | 4           |
| 5.4                   | Quality measures for consistency .....       | 4           |
| 5.5                   | Quality measures for precision .....         | 6           |
| 5.5.1                 | Representational precision .....             | 6           |
| 5.5.2                 | Measurement precision .....                  | 7           |
| 5.6                   | Quality measures for timeliness .....        | 9           |
| 6                     | Implementation requirements .....            | 11          |
| Annex A (informative) | Document identification .....                | 12          |
| Bibliography .....    |                                              | 13          |
