ISO 21684:2025-09 (E)

Fans - Laboratory test methods for air circulating fans

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1
3.1 Air circulating fans 2
3.2 Fan performance variables 3
3.3 Force 3
3.4 General definitions 3
3.5 Psychrometrics 4
3.6 Test configuration 4

4 Symbols, abbreviated terms and subscripts 5
4.1 Symbols and abbreviated terms 5
4.2 Subscripts 5

5 Instruments and methods of measurement 6
5.1 Accuracy 6
5.1.1 General 6
5.1.2 Instrument accuracy 6
5.1.3 Measurement uncertainty 6
5.1.4 Uncertainty of a result 6
5.2 Measurements to determine thrust and airflow rate 7
5.2.1 Airflow rate 7
5.2.2 Thrust 7
5.2.3 Dimensional measurements 7
5.3 Power 7
5.3.1 General 7
5.3.2 Meters 7
5.3.3 Calibration 8
5.3.4 Averaging 8
5.4 Fan speed 8
5.5 Air density 8
5.5.1 General 8
5.5.2 Thermometers 8
5.5.3 Barometers 8

6 Equipment and Setups 9
6.1 Allowable test setups 9
6.2 Load cell orientation 9
6.3 Minimum testable configuration 9

7 Observations and Conduct of Test 9
7.1 General test requirements 9
7.1.1 Equilibrium 9
7.1.2 Extraneous airflow 10
7.1.3 Run-in requirements 10
7.2 Data to be recorded 10

7.2.1 Test unit 10
7.2.2 Test setup 10
7.2.3 Instruments 10
7.2.4 Test data 10
7.3 Test procedures 11

8 Calculations 11
8.1 Calibration correction 11
8.2 Ambient air density 11

8.3 Thrust 12
8.4 Area 12
8.5 Airflow rate 12
8.6 Power 12
8.7 Fan total pressure 13
8.8 Overall efficiency 13
8.9 Circulating fan efficacy 13
8.10 Ceiling Fan Energy Index (C) 13
8.11 Thrust efficiency ratio 14

9 Report and results of test 14
9.1 Test report and results of test 14
9.2 Personnel 16

10 Figures 17

Annex A (informative) Air circulating fan subcategories 24
