# IEC/TS 61400-4-1:2026-04 (E)

## Wind energy generation systems - Part 4-1: Reliability assessment of drivetrain components in wind turbines

## Contents

Page

FOREWORD ..... 3
INTRODUCTION ..... 5
1 Scope ..... 6
2 Normative references ..... 6
3 Terms, definitions, abbreviated terms, units and conventions ..... 7
3.1 Terms and definitions ..... 7
3.2 Abbreviated terms and units ..... 8
4 System reliability analysis model ..... 10
4.1 General ..... 10
4.2 Failure mode identification, classification, and system element assignment ..... 10
5 Component reliability analysis models ..... 12
5.1 Individual failure modes ..... 12
5.2 Gear reliability calculation ..... 12
5.2.1 General ..... 12
5.2.2 Estimation of service life for defined failure probabilities ..... 12
5.2.3 Extrapolation of failure probabilities to the design life ..... 16
5.3 Rolling bearing reliability calculation ..... 17
5.4 Shaft reliability calculation ..... 18
Annex A (informative) Example reliability calculations ..... 20
A.1 General ..... 20
A.2 Example system reliability model ..... 20
A.2.1 Identification of components ..... 20
A.2.2 Identification of system elements ..... 20
A.2.3 Classification and selection of system elements ..... 21
A.2.4 Arrangement of reliability model and calculation of system reliability ..... 21
A.2.5 Example system assumptions ..... 21
A.3 Example gear tooth surface durability (pitting) reliability calculation ..... 22
A.3.1 Example gear assumptions ..... 22
A.3.2 Estimation of service life for defined failure probabilities ..... 22
A.3.3 Extrapolation of failure probabilities to the design life ..... 25
A.4 Example gear tooth bending strength reliability calculation ..... 26
A.4.1 Example gear assumptions ..... 26
A.4.2 Estimation of service life for defined failure probabilities ..... 26
A.4.3 Extrapolation of failure probabilities to the design life ..... 28
A.5 Example rolling bearing contact fatigue reliability calculation ..... 29
A.6 Example shaft fatigue fracture reliability calculation ..... 29
A.6.1 Example shaft assumptions ..... 29
A.6.2 Estimation of life for the nominal failure probability ..... 29
A.6.3 Extrapolation of service life for 10% failure probability ..... 30
A.7 Example system reliability calculation ..... 31
Annex B (informative) Application of the Weibull distribution to rolling bearing fatigue life ..... 32
Bibliography ..... 35

Figure 1 – Calculated design versus apparent failure probability ..... 5
Figure 2 – Example of a system elements tree..... 11
Figure 3 – Service-life calculation for a 50 % failure probability (top) from a scaled LRD (bottom) ..... 13
Figure 4 – S-N curve for different failure probabilities (Hein et al. 2018)..... 15
Figure A.1 – Functional elements..... 20
Figure A.2 – System elements ..... 21
Figure A.3 – Service-life calculation with 1 % failure probability S-N curve (bottom) and failure probability (top) ..... 24
Figure A.4 – Lognormal fit for gear pitting failure probability..... 25
Figure A.5 – Lognormal fit for gear bending failure probability..... 28
Figure B.1 – Evaluation of identical data by 2- and 3-parameter Weibull distributions ..... 32
Figure B.2 – Estimation of Weibull parameter $\gamma$ by 3-parameter Weibull evaluation..... 33
Figure B.3 – Evaluation of identical data by five test scenarios..... 34

Table 1 – Failure probability conversion factors for permissible gear stresses..... 15
Table A.1 – Simplified LRD..... 22
Table A.2 – Contact stress for each load bin ..... 22
Table A.3 – Number of cycles for each load bin ..... 23
Table A.4 – Number of cycles for each load bin ..... 23
Table A.5 – Damage for each load bin ..... 24
Table A.6 – Damage sum, lifetime margin factor, and lifetime ..... 24
Table A.7 – Bending stress for each load bin..... 26
Table A.8 – Number of cycles for each load bin ..... 27
Table A.9 – Number of cycles for each load bin ..... 27
Table A.10 – Damage for each load bin ..... 27
Table A.11 – Damage sum, lifetime margin factor, and lifetime..... 27
Table A.12 – Torsional stress for each load bin ..... 29
Table A.13 – Number of cycles for each load bin ..... 30
Table B.1 – Effect of test scenario on $L_{10}$ and Weibull parameters $\beta$ and $\eta$..... 34
