ISO/TR 15746-4:2026-06 (E)

Automation systems and integration - Integration of advanced process control and optimization capabilities for manufacturing systems - Part 4: Application for distillation process

Contents

Page

Foreword ..... **iv**

Introduction ..... **v**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Analysis of the distillation process **2**
4.1 Introduction to the distillation process 2
4.2 Control and optimization 4
4.2.1 Regular control system analysis 4
4.2.2 Soft sensor and state estimation 5
4.2.3 Advanced process control 5
4.2.4 Real-time optimization 5

5 Technical scheme **5**
5.1 Technical framework for the distillation column APC-O system 5
5.2 Soft sensor 6
5.3 Advanced process control 6
5.4 Real-time optimization 7
5.5 Performance evaluation and monitoring 8
5.5.1 Evaluation of regular control performance 8
5.5.2 Evaluation of model predictive control performance 8
5.5.3 Monitoring of key economic indicators 8

6 Information exchange model **8**
6.1 Overview 8
6.2 Information exchange model L2 8
6.3 Information exchange model L3 10
6.3.1 Laboratory analysis data 10
6.3.2 Scheduling and optimization instructions 11
6.4 Information exchange model within APC-O 11
6.4.1 Overview 11
6.4.2 Soft sensor 11
6.4.3 Advanced controller 13
6.4.4 Optimizer 16
6.4.5 Performance evaluation 18

7 System lifecycle integration workflow **20**
7.1 Overview 20
7.2 Requirement analysis phase 22
7.3 Design phase 22
7.4 Develop phase 22
7.5 Execution phase 25
7.6 Support phase 27

8 APC-O validation process **28**
8.1 APC-O validation process for distillation column 28
8.2 Typical validation indicators for the distillation column APC-O system 29

Bibliography **32**
