ISO/TS 25271:2026-08 (E)

Automation systems and integration - Industrial digital twin interface architecture

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Abbreviated terms 4

5 Interface architecture of industrial digital twin system 4
5.1 Overview 4
5.2 Three elements of the industrial digital twin interface architecture 5
5.2.1 General 5
5.2.2 Industrial digital twin (iDTw) 6
5.2.3 Physical twin (PTw) 6
5.2.4 Twinning interface 6

6 Comparison with existing architectures 7
6.1 General 7
6.2 Digital twin framework for manufacturing of ISO 23247 (all parts) [11] 7
6.3 Digital twin reference architecture of ISO/IEC 30173 [17] and ISO/IEC 30188 8
6.4 Cyber-physical system (CPS) 10
6.5 Asset administration shell (AAS) 11

7 Features of the industrial digital twin system 12
7.1 Twinning interface of iDTw system: mutual augmentation 12
7.1.1 General 12
7.1.2 Feedback control loop 13
7.1.3 Augmented simulation for prediction 14
7.2 Lifecycle of iDTw system 15

Annex A (informative) Use cases of the industrial digital twin interface architecture 16

Annex B (informative) Inclusion of iDTw inside PTw 20

Annex C (informative) Implementation of the industrial digital twin interface architecture 23

Annex D (informative) Comparison of similar terminologies 26

Bibliography 27
