ISO 16100-2:2003-11 (E)

Industrial automation systems and integration - Manufacturing software capability profiling for interoperability - Part 2: Profiling methodology

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Abbreviated terms 3

5 Capability profiling method 3
5.1 Capability profiling concept 3
5.2 Capability profiling process 4
5.3 Software requirements analysis process 5
5.4 Software unit selection and verification, or creation process 5

6 Elements and rules for capability profiling 6
6.1 Taxonomy 6
6.2 Capability classes and their content 6
6.3 Capability templates and rules 11
6.4 Capability profiles and rules 12
6.5 Software unit profile database 13
6.6 Rules for matching capability profiles 13
6.7 Interoperability criteria 13

7 Conformance 13

Annex A (informative) Reference methods 14

A.1 Extensible Markup Language (XML) 14
A.2 Vocabularies, definitions and interchange formats for software packages: Open Software Description (OSD) and Channel Definition Format (CDF) 14
A.3 Distributing software services: Open Distributed Processing (ODP) and Common Object Request Broker Architecture (CORBA) 15
