ISO 10770-2:1998-05 (E)

Hydraulic fluid power - Electrically modulated hydraulic control valves - Part 2: Test methods for three-way directional flow control valves

Contents

Page

1 Scope 1

2 Normative references 1

3 Definitions 1

4 Symbols and units 2

5 Standard test conditions 3

6 Test installation 3

7 Electrical tests 4

8 Performance tests 6

9 Endurance test 20

10 Pressure impulse test 21

11 Environmental tests 21

12 Presentation of results 22

13 Identification statement 25

Tables

1 Symbols and units 2

2 Standard test conditions 3

3 Sinusoidal signal function 19

4 Input step functions 20

A.1 Permissible systematic errors of measuring instruments as determined during calibration 35

Figures

1 Typical steady-state test circuit 26

2 Typical dynamic test circuit 27

3 Valve coil inductance 28

a) Inductance test 28

b) Voltage vector diagram 28

4 Valve coil step response 29

5 Internal leakage versus input signal 29

6 Output flow versus input signal at constant valve pressure drop 30

7 Threshold characteristics 30

8 Output flow versus valve pressure drop (without integral pressure compensation) 31

9 Output flow versus valve pressure drop (with integral pressure compensation) 31

10 Limiting power curve 32

11 Output flow versus fluid temperature 32

12 Blocked port load versus input signal 33

13 Frequency response 33

14 Step response 34

a) Transient response to step input signal 34

b) Transient response to load pressure step with flow compensation 34

Annexes

A (normative) Errors and classes of measurement 35

B (informative) Guidance on conducting the tests 36

C (informative) Bibliography 37
