

# ISO/TR 25398:2006-10 (E)

Earth-moving machinery - Guidelines for assessment of exposure to whole-body vibration of ride-on machines - Use of harmonized data measured by international institutes, organizations and manufacturers

---

| <b>Contents</b>  |  | <b>Page</b> |
|--|--|-------------|
| Foreword .....   |  | iv          |
| Introduction .....   |  | v           |
| 1 Scope .....  |  | 1           |
| 2 Normative references .....   |  | 1           |
| 3 Terms and definitions .....  |  | 2           |
| 4 Estimation of vibration magnitude .....  |  | 5           |
| 5 Estimation of daily exposure duration .....  |  | 5           |
| 6 Consideration of uncertainties .....   |  | 6           |
| 7 Determination and assessment of vibration exposure .....   |  | 7           |
| 8 Documentation .....  |  | 16          |
| Annex A (informative) Machine types and their typical operating conditions .....   |  | 17          |
| Annex B (informative) Equivalent vibration values of whole-body vibration emission of earth-moving machinery .....         |  | 21          |
| Annex C (informative) Calculation form for total vibration exposure points .....   |  | 23          |
| Annex D (informative) Example documentation form for whole-body vibration exposure .....                                   |  | 24          |
| Annex E (informative) Guidelines for use and working conditions of earth-moving machinery to reduce vibration levels ..... |  | 25          |
| Annex F (informative) Guidelines for establishing and reporting vibration reduction of earth-moving machinery .....        |  | 27          |
| Bibliography .....   |  | 28          |
