DIN EN 1591-1:2011-08 (E)

Flanges and their joints - Design rules for gasketed circular flange co nnections - Part 1: Calculation method (includes Amendment A1:2009 + Corrigendum AC:2011)

Contents

Page

Foreword 3

1 Scope 6
1.1 General 6
1.2 Requirement for use of the Calculation method 6
1.3 Validity 6

2 Normative references 8

3 Notation 9
3.1 Use of figures 9
3.2 Subscripts and special marks 9
3.3 Symbols 10
3.4 Terminology 14

4 Calculation parameters 24
4.1 Flange parameters 25
4.2 Bolt parameters 29
4.3 Gasket parameters 29

5 Internal forces (in the joint) 32
5.1 Applied loads 32
5.2 Compliance of the joint 33
5.3 Minimum forces necessary for the gasket 33
5.4 Internal forces in assembly condition (l = 0) 34
5.5 Internal forces in subsequent conditions (l = 1, 2,) 36

6 Checking of the admissibility of the load ratio 36
6.1 General 36
6.2 Bolts 37
6.3 Gasket 38
6.4 Integral flange and collar 38
6.5 Blank flange 39
6.6 Loose flange with collar 40

Annex A (informative) Requirement for limitation of non-uniformity of gasket stress 41

Annex B (informative) Dimensions of standard metric bolts 42

Annex C (informative) Scatter of bolting-up methods 43

Annex D (informative) Assembly using torque wrench 44

Annex E (informative) Flange rotations 46

E.1 General 46
E.2 Use of flange rotation 46
E.3 Calculation of flange rotations 46

Annex F (informative) Diagram of calculation sequence 48

Annex G (informative) Joints with spacer-seated flanges 50

G.1 Introduction 50
G.2 Behaviour of spacer-seated gaskets 50
G.3 Simplified treatment 50

Annex H (normative) !!!!Use of the former creep factor gC""""" 55

Annex ZA (informative) !Relationship between this European Standard and the Essential Requirements of EU Directive 97/23/EC""""" 56
