

DIN EN 13121-3:2016-10 (E)

GRP tanks and vessels for use above ground - Part 3: Design and workmanship

Contents		Page
European foreword		8
Introduction		9
1	Scope	10
2	Normative references	10
3	Terms and definitions	12
4	Symbols and abbreviations	13
5	Information and requirements to be supplied and documented	16
5.1	General	16
5.2	Information to be obtained by the manufacturer	16
5.3	Information to be prepared by the manufacturer	17
5.4	Final documentation	18
6	Material	18
6.1	General	18
6.2	Chemical protective barrier	18
6.2.1	General	18
6.2.2	Thermoplastics linings	18
6.2.3	Resin based linings	18
6.3	Flammability	18
6.4	Electrical resistivity	19
7	Mechanical properties	19
7.1	General	19
7.2	Heat deflection temperature	19
7.3	Laminate construction	19
7.4	Laminate thickness	21
7.5	Laminate properties	21
7.6	Inter-laminar shear strength	21
7.6.1	Laminate	21
7.6.2	Thermoplastics linings	21
7.7	Peel strength of laminates	22
7.8	Pull-off strength of laminates and thermoplastic liner	22
7.9	Selection of physical properties of materials and allowable design factors	22
7.9.1	General	22
7.9.2	Basic design	22
7.9.3	Advanced design	23
7.9.4	Design factors	24
7.9.5	Overall design factors K and F	24
8	Determination of design strain and loadings	27
8.1	General	27
8.2	Limit design strains	28
8.2.1	General	28
8.2.2	Limit resin strain σ_r	28
8.2.3	Limit strain for laminate or lamina σ_{lim}	28
8.2.4	Limit test strain test	29

8.3	Limit design laminate loadings	29
8.4	Determination of the mechanical values from laminates	29
8.4.1	General	29
8.4.2	Calculation of laminate values without experimental test data	29
8.4.3	Laminate with experimental data	30
8.5	Laminate thickness	30
9	Design	30
9.1	Introduction	30
9.2	Determination of external loads	31
9.2.1	Snow loads	31
9.2.2	Wind loads	31
9.2.3	Seismic loads	32
9.2.4	Insulation loads	33
9.2.5	Loads resulting from connections	33
9.2.6	Agitation	34
9.2.7	Pressure due to inadequate venting	34
9.2.8	Personnel loading	34
9.2.9	Internal stresses in vessels and tanks due temperatures	34
9.3	Verification by the partial factor method	34
9.3.1	General	34
9.3.2	Dimensioning by using (A5)-factored loads	40
9.4	Drawings and design calculations	41
9.5	Design details	41
9.5.1	Design temperature TS	41
9.5.2	Pressure	41
10	Design analysis	42
10.1	Symbols and units	42
10.2	Vertical vessels or tanks, cylinders under loads ($t < 0,01D$)	44
10.2.1	Circumferential loadings	44
10.2.2	Combined axial loading	45
10.3	Cylindrical shells subject to compressive loadings -- critical buckling criteria	46
10.3.1	General	46
10.3.2	Critical axial buckling load	46
10.3.3	Critical circumferential buckling pressure	47
10.3.4	Combined axial and radial compressive loadings	48
10.3.5	Critical buckling pressure for cylindrical shell stiffened with external or internal rings.49	
10.4	Conical shells	50
10.4.1	General requirements	50
10.4.2	Shallow conical ends	52
10.4.3	Conical ends subject to internal pressure	52
10.4.4	Conical ends subject to external pressure	54
10.4.5	Shell conical covers	56
10.5	Dished end	57
10.5.1	General requirements	57
10.5.2	Dished ends subject to internal pressure	58
10.5.3	Stability for dished ends subject to external pressure	59
10.6	Design of flat bottoms and skirts for vertical tanks and vessels	60
10.6.1	Definitions	60
10.6.2	Fully supported, flat bottom tanks	60
10.6.3	Vessels with flat bases subjected to pressure	67
10.6.4	Dished bottom and conical bottom configurations	67
10.7	Circumferential seams for cylindrical joints	77
10.7.1	General	77
10.7.2	Construction without thermoplastics liner	79
10.7.3	Construction with thermoplastics liner	79
10.8	Openings, branches and compensating laminate	79
10.8.1	General	79
10.8.2	Symbols	80

10.8.3	Compensation requirements for openings	80
10.8.4	Pull out load from nozzles	87
10.8.5	Prevention of failure in peel	87
10.8.6	Pad connections	87
10.8.7	Screwed connections	89
10.8.8	Access and inspecting openings	89
10.8.9	Gusset on branches	89
10.9	Flat Panels or Blind flanges	89
10.9.1	General	89
10.9.2	Symbols	90
10.9.3	Circular panels	90
10.10	Horizontal tanks and vessels	93
10.10.1	Types of supports	93
10.10.2	Symbols	95
10.10.3	Unit loads of the cylindrical shell	96
10.10.4	Unit loads on saddle position	103
10.10.5	Unit loads for horizontal loads at the vessel	109
10.11	Large diameter pipes and pipe fittings	110
10.11.1	General	110
10.11.2	Joints	111
10.11.3	Elbows	112
10.11.4	Large cut-outs and Tees	112
11	Bolted flange connections	115
11.1	General	115
11.2	Full face flanges design	121
11.2.1	General	121
11.2.2	Symbols	122
11.2.3	Pipe loads on flanges	124
11.2.4	Gasket load and bolt torque	124
11.2.5	Summary of loads	125
11.2.6	Total bending moment	125
11.2.7	Flange design	125
11.2.8	Flange slope	127
11.3	Stub flange design with backing ring	133
11.3.1	General	133
11.3.2	Loads, bending moment and design for backing ring made of steel or GRP	134
11.3.3	Stub flange loadings	135
11.3.4	Stub shear interface design	135
11.3.5	Stub end or flange design	135
11.3.6	Seating stress	136
11.4	Butt and strap jointed flanges at vessels or tanks	138
12	Supports for vessels and tanks	138
12.1	General	138
12.2	Supports and mountings for tanks and vessels	139
12.2.1	General considerations for supports	139
12.2.2	Supports for vertical vessels	139
13	Seismic loading	145
14	Design calculation for tank and vessel anchorage	145
14.1	General	145
14.2	Design for uplift	145
14.3	Design for anchor bolts	145
15	Structures and fittings	149
15.1	General	149
15.2	Internal structures and fittings	149
15.3	External structures and fittings	149
15.4	Lifting devices	149

16	Local load analysis	154
17	Quality Control	154
17.1	General	154
17.2	Works requirements	154
17.2.1	General	154
17.2.2	Raw materials storage	154
17.2.3	Manufacturing area	154
17.2.4	Conditions for laminating	154
17.3	Documentation to be prepared by the manufacturer	155
17.3.1	Technical documentation	155
17.3.2	Records and documentation requirements for raw materials	155
17.3.3	Manufacturing documentation requirements	156
17.3.4	Quality control documentation requirements	156
17.4	Manufacture	161
17.4.1	General	161
17.4.2	Fabrication of thermoplastics liners	162
17.4.3	Fabrication of laminates	162
17.4.4	Imperfections in laminates	163
17.4.5	Curing	163
17.5	Inspection and testing after completion of fabrication	163
17.5.1	Visual and dimensional inspection	163
17.5.2	Physical test to be carried out	164
17.5.3	Coupon testing	164
17.6	Experimental Design Verification Method for pressure vessel	165
17.6.1	General	165
17.6.2	Manufacture of the prototype vessel	165
17.6.3	Tests to be applied to prototype vessels	166
18	Marking	166
Annex A (informative) Product testing for serial or batch production process		168
A.1	Initial type testing (ITT)	168
A.2	Testing of samples	168
A.2.1	General	168
A.2.2	Batch release tests (BRT)	168
A.2.3	Process control tests	169
A.3	Inspection and test records	170
A.3.1	General	170
A.3.2	Marking	170
A.3.3	Delivery, installation, maintenance	170
Annex B (informative) Derivation of laminate properties from laminate properties		171
B.1	General	171
B.2	Lamina/laminate thickness	171
B.3	Laminate modulus	172
B.4	Determination of laminate flexural stiffness	173
B.5	Determination of laminate strains from load resultants	173
Annex C (normative) Pressure and leak testing		175
C.1	General	175
C.2	Open top tanks	175
C.3	Static head test of closed tanks and vessels	176
C.3.1	having a specific gravity up to 1,0	176
C.3.2	having a specific gravity greater than 1,0	176
C.4	Hydraulic pressure test	176
C.4.1	Test done in the working attitude	176

C.4.2	Tests done in other than the working attitudes	176
C.4.3	Pneumatic testing	177
C.4.4	Vacuum test	177
Annex D (normative) Methods of tests		178
D.1	General	178
D.1.1	Tests	178
D.1.2	Accuracy of test equipment	178
D.2	Loss on ignition	179
D.3	Tensile strength of thermoplastics welds	179
D.4	Bend test for thermoplastics welds	179
D.4.1	Introduction	179
D.4.2	Test arrangement	179
D.4.3	Test pieces	180
D.4.4	Method of test	180
D.4.5	Requirements from flexural test	180
D.4.6	Test report	180
D.5	Ultimate tensile unit strength of laminates	181
D.5.1	Test pieces and procedure	181
D.5.2	Simple laminates	181
D.5.3	Combined laminates	181
D.6	Unit tensile modulus of laminates	182
D.7	Inter laminar shear strength of laminates	184
D.7.1	Form of test specimen	184
D.7.2	Number of test specimens	184
D.7.3	Procedure	184
D.7.4	Results	184
D.7.5	Report	184
D.8	Lap shear strength of bond between thermoplastics lining and laminate or between laminates	185
D.8.1	Form of the test specimen	185
D.8.2	Number of test specimens	185
D.8.3	Procedure	185
D.8.4	Report	186
D.9	Peel strength of bond between laminate layers	186
D.9.1	Form of the specimen	186
D.9.2	Number of specimens	186
D.9.3	Procedure	187
D.9.4	Report	187
D.10	Flexural short-term creep test (flexural modulus E1h and E24h test)	189
D.10.1	General	189
D.10.2	Definitions	189
D.10.3	Test device	189
D.10.4	Test pieces	190
D.10.5	Procedure	190
D.10.6	Calculation	190
D.11	Barcol hardness	191
D.12	Determination of electrical resistivity	191
D.13	Glass transition temperature by DSC of cured resin	191
D.14	Spark testing of thermoplastics welds	191
D.14.1	General	191
D.14.2	Apparatus	192
D.14.3	Procedure	192
D.15	Long term flexural creep test	192
D.15.1	General	192
D.15.2	Definitions	192
D.15.3	Test device	192
D.15.4	Test pieces	193
D.15.5	Procedure	193

D.15.6	Calculation	193
D.16	Hardness of rubber	194
D.17	Flash point test	194
D.18	Heat deflection temperature test	194
D.19	Flexural strength of laminate	194
D.20	Pull-off strength from laminates	194
Annex E (normative) Approval testing of laminators		196
E.1	General	196
E.2	Assessment of the laminator	196
E.3	Procedure	196
E.4	Theory exam	197
E.5	Test pieces	197
E.6	Evaluation of test pieces	197
E.6.1	General	197
E.6.2	Test procedure 1	198
E.6.3	Test procedure 2	198
E.6.4	Test procedure 3	198
E.7	Minimum requirements for acceptance	198
E.8	Test certificate	199
E.9	Validity and renewal	199
E.10	Range of approval	199
Annex F (informative) Design by stress analysis		201
F.1	General	201
F.2	Typical methods	201
F.3	General requirements	201
F.4	Important determination results	201
F.5	Design factors	201
Annex G (normative) Environmental aspects		202
G.1	Principle	202
G.2	Design and Manufacturing	202
G.3	Effects of materials on water	202
G.4	Effects of materials on food	203
G.5	Recycling	203
G.6	Storage of substances hazardous to water	203
Annex ZA (informative) Relationship between this European Standard and the essential requirements of Directive 2014/68/EU aimed to be covered		204
