DIN EN 12952-3:2023-01 (Englisc h)

Water-tube boilers and auxiliary installations - Part 3: Design and calculation for pressure parts of the boiler

Contents

Page

European foreword 8

1 Scope 10

2 Normative references 10

3 Terms and definitions 11

4 Symbols and abbreviations 11

5 General 11
5.1 Purpose 11
5.2 Dimensions of pressure parts 11
5.3 Strength of pressure parts 12
5.4 Design by analysis 12
5.5 Cyclic loading 12
5.6 Other design requirements 13
5.6.1 General 13
5.6.2 Access 14
5.6.3 Drainage and venting 14
5.7 Design, calculation and test pressures 14
5.7.1 Design pressure 14
5.7.2 Calculation pressure 14
5.7.3 Calculation pressure for pressure differences 15
5.7.4 Hydrostatic test 15
5.8 Metal wastage 16
5.8.1 Internal wastage 16
5.8.2 External wastage 16
5.8.3 Requirements 16
5.8.4 Stress corrosion 16
5.8.5 Mechanical requirements 17
5.9 Attachment on pressure parts 17
5.9.1 Load carrying attachments 17
5.9.2 Non load carrying attachments 17

6 Calculation temperature and nominal design stress 17
6.1 Calculation temperature 17
6.1.1 General 17
6.1.2 Circulation boilers 18
6.1.3 Once-through boilers, superheaters and reheaters 18
6.1.4 Hot water generators 18
6.1.5 Temperature allowances for unheated components 18
6.1.6 Headers 19
6.1.7 Unheated components 19
6.1.8 Components protected against radiation 19
6.1.9 Components heated by convection 19
6.1.10 Components heated by radiation 20
6.2 Maximum through-the-wall temperature difference and maximum flue gas temperature for heated drums and headers 21
6.2.1 Maximum through-the-wall temperature difference 21
6.2.2 Headers exposed to flue gas 21

6.2.3 Allowable deviations ... 22
6.3 Design stress ... 22
6.3.1 General ... 22
6.3.2 Rolled and forged steels ... 23
6.3.3 Austenitic steels ... 23
6.3.4 Non-alloy and low-alloy cast steel ... 24
6.3.5 Nodular graphite cast iron ... 24
6.3.6 Design stress for welded connections operating under creep condition ... 25
6.3.7 Design stress for test pressure ... 25

7 Cylindrical shells of drums and headers under internal pressure ... 25
7.1 Shell thickness ... 25
7.1.1 Requirements ... 25
7.1.2 Required wall thickness including allowances ... 26
7.2 Basic calculation ... 26
7.2.1 Required wall thickness without allowances ... 26
7.2.2 Different thickness ... 26
7.2.3 Fabrication tolerances ... 26
7.3 Combined stress in drum or header shells ... 27
7.3.1 General ... 27
7.3.2 Stress from longitudinal loads ... 27
7.3.3 Longitudinal bending stress ... 28
7.3.4 Evaluation of ligament stress for inclined ligaments in drums ... 29
7.4 Boiler drum supports ... 30
7.5 Other stresses in cylindrical shells ... 31

8 Openings and branches in cylindrical shells of drums and headers and integral tubes ... 31
8.1 General ... 31
8.1.1 Requirements for the ligament efficiency of the main body with openings and branches ... 31
8.1.2 Effective lengths for calculation of efficiencies of components ... 36
8.1.3 Conditions for isolated openings ... 37
8.1.4 Requirements for design of branches ... 37
8.1.5 Requirements for the design of reinforcing pads ... 38
8.2 Efficiency factor, calculation by way of approximation, and maximum diameter of unreinforced openings ... 38
8.2.1 General ... 38
8.2.2 Allowable efficiency and maximum diameter of unreinforced opening ... 38
8.2.3 Isolated openings ... 39
8.2.4 Adjacent openings ... 41
8.3 Design of openings and branches in cylindrical shells (efficiency and reinforcement) ... 42
8.3.1 Symbols and abbreviations ... 42
8.3.2 Requirements for application ... 42
8.3.3 Design of isolated openings and branch connections ... 47
8.3.4 Design of adjacent openings and branch connections ... 50
8.4 Bolted connections ... 51
8.4.1 General ... 51
8.4.2 Symbols and abbreviations ... 52
8.4.3 Calculation of bolt diameter ... 53
8.4.4 Calculation of bolt load ... 54
8.4.5 Calculation temperature tc ... 56
8.4.6 Design strength value K ... 57
8.4.7 Safety factor S ... 57
8.4.8 Quality factor q ... 57
8.5 Screwed and socket welded connections ... 58
8.5.1 Screwed connections into the belt ... 58
8.5.2 Screwed socket connections ... 58
8.5.3 Socket welded connections ... 59

9 Headers and plain tubes of rectangular section ... 60
9.1 General ... 60
9.2 Symbols and abbreviations ... 62
9.3 Required wall thickness ... 63

9.3.1 General 63
9.3.2 Minimum wall thickness at the centre of one side 64
9.3.3 Minimum wall thickness at the corners 64
9.3.4 Minimum thickness at a line of openings 64
9.3.5 Minimum wall thickness at staggered opening arrangement (diagonal pitch) 65
9.3.6 Minimum wall thickness at isolated openings 65

10 Ends and spherical shells 66
10.1 Symbols and abbreviations 66
10.2 Spherical shells and dished heads 66
10.2.1 General 66
10.2.2 Calculation formula 68
10.2.3 Openings in dished ends and spherical ends 71
10.3 Unstayed flat ends 75
10.3.1 General 75
10.3.2 Thickness of circular unstayed flat ends 78
10.3.3 Thickness of non-circular and rectangular unstayed flat ends 78
10.4 Flat unstayed closures 81

11 Tubes 83
11.1 Symbols and abbreviations 83
11.2 Thickness of straight boiler tubes 83
11.2.1 Required wall thickness with allowances 83
11.2.2 Required wall thickness without allowances 84
11.2.3 Minimum thickness 84
11.2.4 Circumferentially butt welded tubes 85
11.3 Thickness of tube bends and elbows 85
11.3.1 General 85
11.3.2 Required wall thickness with allowances 85
11.3.3 Required wall thickness without allowances 86
11.3.4 Departure from circularity of tube bends 86
11.4 Flexibility of integral tubing systems 87
11.4.1 General 87
11.4.2 Analysis 87
11.5 Structural attachments to tubes 87
11.5.1 General 87
11.5.2 Attachments welded on tube bends 89
11.5.3 Length of attachments 89
11.5.4 Limit of intensity in the case of radial loading 89
11.5.5 Calculation of intensity in the case of radial loading 89
11.5.6 Strength of welds 91
11.6 Fitting and joining of heated tubes 92
11.6.1 Fitting of tubes 92
11.6.2 Joining of heated tubes 92
11.7 Joining of unheated tubes 92
11.7.1 General 92
11.7.2 Flanges and bolting 92
11.7.3 Butt welded joints 92
11.7.4 Screwed or screwed and seal welded joints 92
11.8 Standardized fittings 92

12 Pressure parts of irregular shape 93
12.1 Hydrostatic test for determining the allowable internal pressure 93
12.1.1 General 93
12.1.2 Proof test to produce yielding 93
12.1.3 Proof test to destruction 94
12.2 Numerical methods 94
12.2.1 General 94
12.2.2 Methods 94
12.2.3 Evaluation of stress 95

13 Fatigue 95

13.1 General 95
13.1.1 Procedure 95
13.1.2 Fatigue loading 95
13.1.3 Calculation of fluctuating stress 96
13.1.4 Fatigue assessment 96
13.2 Symbols and abbreviations 96
13.3 Exemption rule for fatigue analysis 98
13.3.1 General 98
13.3.2 Materials 98
13.3.3 Loadings 99
13.3.4 Temperature differences during transient operating conditions 100
13.4 Stress analysis for fatigue calculation 106
13.4.1 Principal and equivalent stresses 106
13.4.2 Temperature of a load cycle 106
13.4.3 Protection of the magnetite layer 107
13.4.4 Allowable circumferential stress range at the inside corner of a bore 107
13.4.5 Circumferential stress caused by pressure at the inside corner of a bore 107
13.4.6 Stresses on the branch caused by external forces and moments 108
13.4.7 Thermal stresses 108
13.4.8 Upper and lower limit of the circumferential stress at the inside corner of a bore 108
13.4.9 Admissible through-the-wall temperature differences 112
13.4.10 Allowable temperature transients 113
13.4.11 Components with oblique and/or non-radial branches 113
13.5 Example calculations 113

Annex A (normative) Calculation of tube bends and elbows .....

A.1 General 117
A.2 Symbols and abbreviations 117
A.3 Calculation 118
A.3.1 Required wall thickness 118
A.3.2 Calculation of the wall thickness 118
A.3.3 Calculation of stress 120
A.3.3.1 The strength conditions for the intrados of the bend shall be: 120
A.3.3.2 The strength conditions for the extrados of the bend shall be: 120

Annex B (normative) Fatigue cracking - Design to allow for fluctuating stress 127

B.1 General 127
B.2 Conditions 127
B.3 Symbols and abbreviations 129
B.4 Cyclic stress range and mean cyclic stress in the case of uniaxial and multiaxial fluctuating stress 130
B.4.1 General 130
B.4.2 Uniaxial stress state 130
B.4.3 Multiaxial stress state with principal stress directions constant 130
B.5 Correction factors for taking into account the influences of surface finish and weldments 132
B.6 Controlling stress range 140
B.6.1 General 140
B.6.1.1 Controlling stress range 140
B.6.1.2 Elastic range 140
B.6.1.3 Partly elastic range 140
B.6.1.4 Fully plastic range 140
B.6.2 Correction factor 141
B.7 Permissible stress range with a known number of load cycles 142

Annex C (informative) Examples of calculating the effects of fatigue 143

C.1 General 143

C.2 Calculation of the admissible number of load cycles 143
C.3 Calculation of the admissible temperature gradient 146

Annex D (informative) Physical properties of steels 150

D.1 General 150
D.2 Symbols and abbreviations 150
D.3 Physical properties 150
D.3.1 Density 150
D.3.2 Differential coefficient of linear thermal expansion 150
D.3.3 Heat capacity 151
D.3.4 Thermal diffusivity 151
D.3.5 Poisson's ratio 151
D.4 Physical properties of steels 151
D.4.1 Data sheet (tables) 151
D.4.2 Graphs 153
D.4.3 Polynomials 157

Annex E (informative) Consideration of external wastage due to flue gas exposure 160

E.1 General 160
E.2 Symbols and abbreviations 160
E.3 Wall thickness of straight tubes in accordance to Clause 11 160
E.3.1 Required wall thickness with allowance 160
E.3.2 Required wall thickness without allowances 160
E.3.3 Circumferentially butt welded tubes 160
E.4 Wall thickness of tube bends and elbows in accordance with Clause 11 161
E.4.1 Required wall thickness with allowance 161
E.4.2 Required wall thickness without allowances 161
E.5 Wall thickness of tube bends and elbows in accordance with Annex A 161

Annex F (informative) Significant technical changes between this European Standard and the previous edition 162

Annex ZA (informative) Clauses of this European Standard addressing essential safety requirements of the Pressure Equipment Directive 2014/68/EU 163

Bibliography 165
