

ISO 23588:2023-02 (E)

Radiological protection - General requirements for proficiency tests for in vivo radiobioassay

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Planning	2
4.1 Determination of the type of proficiency test	2
4.2 Choice of measurement tasks	3
4.3 Selection of radionuclides	3
4.4 Selection of activity ranges	3
4.5 Choice of phantom	4
4.6 Announcement of the proficiency test	4
5 Preparation of phantoms and sources	5
5.1 Preparation of phantoms	5
5.2 Preparation of sources	5
5.3 Quality assurance	5
6 Conducting the proficiency test	5
6.1 General	5
6.2 Preparation of the phantom at the participant's facility	6
6.3 Measurement of the phantom by the participants	6
6.4 Reporting protocol	6
7 Data analysis and evaluation of results	7
7.1 General	7
7.2 Determination of the assigned value	7
7.3 Calculation of the performance scores	8
7.4 Report	8
Annex A (informative) Example schedule for a proficiency test	9
Annex B (informative) Example measurement tasks	10
Annex C (normative) MTL for in vivo radiobioassay performance testing	11
Annex D (informative) Examples of phantoms	12
Bibliography	13
