Resistance welding - Weldability - Part 3: Evaluation procedures for weldability in spot weld bonding

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Weld bonding equipment	2
4.1	General	2
4.2	Adhesive dispensing equipment	2
4.3	Storage chamber	2
4.4	Electrodes	2
4.5	Welding current	2
4.6	Mechanical settings	2
4.7	Measurement of parameters	2
4.7.1	Temperature	2
4.7.2	Amount of adhesive applied	2
4.7.3	Welding current and electrode force	3
4.7.4	Electrode cooling water flow rate	3
4.8	Measurement of results	3
4.8.1	Weld diameter	3
4.8.2	Detection of expulsion	3
5	Assembly preparation	3
6	Preliminary adjustments	4
6.1	Electrode alignment	4
6.2	Electrode conditioning	4
7	Determination of the welding current range	5
7.1	Test specimens	5
7.2	Welding parameters	5
7.3	Test procedure	5
7.4	Current range criteria	5
7.5	Three sheet and multiple stack-ups	6
8	Estimation of electrode life	6
8.1	Test specimens	6
8.2	Welding parameters	6
8.3	Procedure	6
8.4	Test criteria, interpretation of results	7
9	Test report	7
9.1	General	7
9.2	Welding current range	8
9.3	Electrode life	8
Annex A (informative)	Electrode alignment	9

Annex B (informative) Specimens with current shunt	11
Annex C (informative) Specific conditions for steel sheet customer qualification	13
Annex D (informative) Specimens for destructive testing	16
Annex E (informative) Example of a test report for welding current range	18
Annex F (informative) Example of a test report for electrode life test	19
Bibliography	20
