

# DIN EN 1011-6:2019-04 (E)

## Welding - Recommendation for welding of metallic materials - Part 6: Laser beam welding

---

| <b>Contents</b>         |   | <b>Page</b> |
|-------------------------|---|-------------|
| European foreword ..... |   | 5           |
| Introduction .....      |   | 6           |
| 1                       | Scope .....   | 7           |
| 2                       | Normative references .....                                | 7           |
| 3                       | Terms and definitions .....                               | 9           |
| 4                       | Health and safety and protection of the environment ..... | 9           |
| 5                       | Quality requirements .....                                | 9           |
| 6                       | Equipment .....   | 10          |
| 6.1                     | General .....   | 10          |
| 6.2                     | Provisions for acceptance testing .....                   | 10          |
| 6.3                     | Provisions for maintenance and calibration .....          | 10          |
| 7                       | Qualification of welding personnel .....                  | 10          |
| 8                       | Welding procedure specification .....                     | 10          |
| 9                       | Welding procedure test .....                              | 10          |
| 10                      | Consumables .....   | 11          |
| 10.1                    | Filler metals .....                                       | 11          |
| 10.2                    | Gases .....   | 11          |
| 11                      | Design .....  | 11          |
| 11.1                    | Overall design of structure or product .....              | 11          |
| 11.2                    | Joint design .....  | 11          |
| 11.3                    | Joint preparation .....                                   | 12          |
| 12                      | Laser beam welding .....                                  | 13          |
| 12.1                    | Characteristics .....                                     | 13          |
| 12.1.1                  | Modes .....   | 13          |
| 12.1.2                  | Energy transfer .....                                     | 13          |
| 12.1.3                  | Pulsed beam welding .....                                 | 14          |
| 12.1.4                  | Beam oscillation .....                                    | 14          |
| 12.1.5                  | Ramping .....   | 14          |
| 12.1.6                  | Beam focussing .....                                      | 14          |
| 12.1.7                  | Gas shielding .....                                       | 14          |
| 12.1.8                  | Use of consumables .....                                  | 14          |
| 12.1.9                  | Hybrid processes .....                                    | 14          |
| 12.2                    | Advantages and limitations .....                          | 15          |
| 12.3                    | Assembling and fixtures .....                             | 15          |
| 12.4                    | Process control .....                                     | 15          |
| 12.5                    | Inspection and testing .....                              | 16          |
| 12.6                    | Imperfections .....                                       | 16          |

|  |           |
|--|-----------|
| <b>Annex A (informative) Equipment</b>   | <b>17</b> |
| A.1 Description of laser process   | 17        |
| A.1.1 Principles   | 17        |
| A.1.2 Components   | 17        |
| A.2 Laser beam sources   | 18        |
| A.2.1 CO2 lasers   | 18        |
| A.2.2 Nd:YAG lasers, lamp pumped   | 19        |
| A.2.3 Nd:YAG lasers, diode pumped  | 19        |
| A.2.4 Yb:YAG lasers, diode pumped (disc lasers)  | 20        |
| A.2.5 High power diode array lasers  | 20        |
| A.2.6 Fibre lasers   | 21        |
| A.2.7 Other types of lasers  | 21        |
| A.3 Guiding, shaping and focusing the beam   | 21        |
| A.3.1 Guiding the beam   | 21        |
| A.3.2 Beam shaping devices (focusing optics)   | 22        |
| A.4 Devices used to create a relative movement between the laser beam and the work piece   | 25        |
| A.5 Fixtures used to hold the work piece   | 26        |
| A.6 Cooling systems  | 27        |
| A.7 Control systems  | 27        |
| <b>Annex B (informative) Laser beam properties</b>   | <b>28</b> |
| <b>Annex C (informative) Information about weldability of metallic materials</b>           | <b>30</b> |
| C.1 General  | 30        |
| C.2 Steels and iron alloys   | 30        |
| C.2.1 General  | 30        |
| C.2.2 C-Mn and structural steels   | 31        |
| C.2.3 Alloy steels   | 31        |
| C.2.4 Stainless steels   | 31        |
| C.2.5 Cast irons   | 31        |
| C.2.6 Soft iron  | 31        |
| C.3 Nickel alloys  | 32        |
| C.4 Aluminium and magnesium alloys   | 32        |
| C.5 Copper and its alloys  | 32        |
| C.6 Refractory and reactive metals   | 32        |
| C.7 Titanium and its alloys  | 33        |
| C.8 Dissimilar metals  | 33        |
| C.9 Non-metals   | 33        |
| <b>Annex D (informative) Information about causes of weld imperfections and prevention</b> | <b>34</b> |
| <b>Annex E (informative) Beam control and monitoring</b>                                   | <b>37</b> |
| E.1 General  | 37        |
| E.2 Focus point  | 37        |
| E.3 Beam alignment and pilot beam coincidence  | 37        |
| E.4 Beam power   | 38        |
| E.5 Beam power distribution  | 38        |
| E.6 Nozzle alignment   | 38        |
| E.7 Pulsed beam power data   | 39        |
| E.8 Manipulators, guides, etc  | 39        |
| <b>Annex F (informative) Laser beam processing</b>   | <b>40</b> |
| F.1 Laser beam cutting   | 40        |
| F.1.1 Characteristics  | 40        |
| F.2 Laser beam drilling  | 41        |
| F.2.1 Characteristics  | 41        |
| F.2.2 Advantages and limitations   | 42        |

|                           |  |           |
|---------------------------|--|-----------|
| <b>F.2.3</b>              | <b>Surface preparation .....</b>                 | <b>42</b> |
| <b>F.3</b>                | <b>Laser beam surface treatment .....</b>        | <b>42</b> |
| <b>F.3.1</b>              | <b>Characteristics .....</b>                     | <b>42</b> |
| <b>F.3.2</b>              | <b>Advantages and limitations .....</b>          | <b>42</b> |
| <b>F.3.3</b>              | <b>Surface preparation .....</b>                 | <b>43</b> |
| <b>F.4</b>                | <b>Laser beam cladding characteristics .....</b> | <b>43</b> |
| <b>F.4.1</b>              | <b>Modes .....</b>                               | <b>43</b> |
| <b>F.4.2</b>              | <b>Advantages and limitations .....</b>          | <b>43</b> |
| <b>F.4.3</b>              | <b>Surface preparation .....</b>                 | <b>43</b> |
| <b>F.5</b>                | <b>Laser beam marking and engraving .....</b>    | <b>43</b> |
| <b>F.5.1</b>              | <b>Characteristics .....</b>                     | <b>43</b> |
| <b>F.5.2</b>              | <b>Advantages and limitations .....</b>          | <b>44</b> |
| <b>F.5.3</b>              | <b>Surface preparation .....</b>                 | <b>44</b> |
| <b>Bibliography .....</b> | <b>.....</b>                                     | <b>45</b> |
