ISO 17735:2009-03 (E)

Workplace atmospheres - Determination of total isocyanate groups in air using 1-(9-anthracenylmethyl)piperazine (MA P) reagent and liquid chromatography

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Principle 1

4 Reagents and materials 3

5 Apparatus 7

6 Air sampling 9
6.1 Pre-sampling laboratory preparation 9
6.2 Pre-sampling field preparation 10
6.3 Collection of air samples 10
6.4 Blanks and negative controls 11
6.5 Bulk products 11
6.6 Shipment of samples 11
6.7 Filter test samples 11
6.8 Impinger test samples 12

7 HPLC analysis 12
7.1 Instrumental settings 12
7.2 HPLC programme 12

8 Data handling 14
8.1 Monomer measurement 14
8.2 Oligomer measurement (total detectable isocyanate) 14

9 Calibration and quality control 14
9.1 Standard matching solutions 14
9.2 Calibration curves 15
9.3 Blank tests 15
9.4 Bulk products 15
9.5 Quality control spikes 15

10 Calculations 15
10.1 Monomer 15
10.2 Oligomers (total detectable isocyanate) 16
11 Interferences 16
12 Determination of performance characteristics 17
12.1 Introduction 17
12.2 Assessment of performance characteristics 18

Annex A (informative) Performance characteristics 25

Bibliography 27
