Foreword 4

Introduction 5

1 Scope 7

2 Normative references 9

3 Terms, definitions and abbreviated terms 10

4 Hazard identification 14

5 Elements of risk assessment 14
5.1 General 14
5.2 Determining the amount and likelihood of an occurrence of an explosive atmosphere 15
5.2.1 General 15
5.2.2 Degree of dispersion of flammable substances 15
5.2.3 Concentration of flammable substances 15
5.2.1 Amount of explosive atmosphere 16
5.3 Determining the presence of effective ignition sources 16
5.3.1 General 16
5.3.2 Hot surfaces 16
5.3.3 Flames and hot gases (including hot particles) 16
5.3.4 Mechanically generated sparks 16
5.3.5 Electrical apparatus 16
5.3.6 Stray electric currents 16
5.3.7 Static electricity 17
5.3.8 Lightning 17
5.3.9 Radio frequency (RF) electromagnetic waves from 10^4 Hz to 3 x 10^{12} Hz (high frequency) 17
5.3.10 Electromagnetic waves from 3 x 10^{11} Hz to 3· x 10^{15} Hz 17
5.3.11 Ionizing radiation 17
5.3.12 Ultrasonics 17
5.3.13 Adiabatic compression and shock waves 17
5.3.14 Exothermic reactions, including self-ignition of dusts 18
5.4 Estimating the possible effects of an explosion 18

6 Elimination or minimization of risk 18
6.1 Fundamental principles 18
6.2 Avoidance or reduction of explosive atmosphere 19
6.2.1 General 19
6.2.2 Process parameters 19
6.2.3 Design and construction of equipment, protective systems and components containing flammable substances 20
6.3 Classification of hazardous atmospheric conditions 21
6.3.1 General 21
6.3.2 Hazardous atmospheric conditions 21
6.4 Requirements for design and construction of equipment, protective systems and components to avoid effective ignition sources 22
6.4.1 General 22
6.4.2 Hot surfaces 23
6.4.3 Flames and hot gases 23
6.4.4 Mechanically generated sparks 24
6.4.5 Electrical apparatus 24
6.4.6 Stray electric currents and cathodic corrosion protection 25
6.4.7 Static electricity 25

Page

6.4.8 Lightning 25
6.4.9 Radio frequency (RF) electromagnetic waves from 10^4 Hz to 3 x 10^{12} Hz 25
6.4.10 Electromagnetic waves from 3 x 10^{11} Hz to 3 x 10^{15} Hz 26
6.4.11 Ionizing radiation 26
6.4.12 Ultrasonics 26
6.4.13 Adiabatic compression and shock waves 27
6.4.14 Exothermic reactions, including self-ignition of dusts 27
6.5 Requirements for design and construction of equipment, protective systems and components to reduce the explosion effects 27
6.5.1 General 27
6.5.2 Explosion-resistant design 28
6.5.3 Explosion relief 28
6.5.4 Explosion suppression 28
6.5.5 Avoidance of explosion propagation (explosion decoupling) 28
6.5.6 Special equipment for underground mining 28
6.6 Provisions for emergency measures 28
6.7 Principles for measuring and control systems for explosion prevention and protection 29

7 Information for use 30
7.1 General 30
7.2 Information on equipment, protective systems and components 30
7.3 Information for commissioning, maintenance and repair to prevent explosion 31
7.4 Qualifications and training 31

Annex A (informative) **Relation between categories and hazardous atmospheric conditions** 32

Annex B (normative) **Tools for use in potentially explosive atmospheres** 33

Annex C (informative) **Standards in preparation by CEN/TC 305** 34

Annex ZA (informative) **Clauses of this European Standard addressing essential requirements or other provisions of EU Directives** 36

Annex ZB (informative) **〈A1〉 Relationship between this European Standard and the Essential Requirements of EU Directive 2006/42/EC** 38

Bibliography 39
