## Air quality - Determination of the number concentration of airborne inorganic fibres by phase contrast optical microscopy - Membrane filter method

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	General method description .....	2
4.1	Limitations of the method by particle type .....	2
4.2	Limit of visibility and detection limits .....	2
4.3	Apparatus and equipment .....	3
4.4	Mounting media .....	5
4.5	Quality assurance .....	6
5	Sampling .....	6
5.1	Flowrate .....	6
5.2	Acceptable fibre loadings on filters .....	7
5.3	Storage and transport .....	7
5.4	Blanks .....	7
5.5	Sample duration and volume .....	8
5.6	Sampling strategy and records .....	9
6	Evaluation .....	10
6.1	Sample preparation .....	10
6.2	Microscope adjustment principles .....	11
6.3	Eyepiece graticule calibration .....	11
6.4	Microscope/counter performance assessment .....	11
6.5	Counting and sizing fibres .....	12
6.6	Calculation of fibre concentration .....	13
7	Sources of errors and uncertainty .....	14
7.1	General .....	14
7.2	Uncertainty .....	14
7.3	Inter-laboratory variability .....	16
7.4	Lowering of intra- and inter-laboratory variance .....	17
8	Test report .....	17
Annex A (informative) Slide mounting: acetone-triacetin procedure .....		19
Annex B (informative) Permanent slide preparation: dimethyl formamide - Euparal procedure .....		21
Annex C (normative) Eyepiece graticule .....		24
Annex D (informative) Measurement of exposed filter area .....		27
Annex E (informative) Microscope adjustment procedure .....		28
Annex F (informative) Sources .....		29
Bibliography .....		30
