

# DIN EN 14460:2018-04 (E)

## Explosion resistant equipment

---

<b>Contents</b>		<b>Page</b>
European foreword .....		4
Introduction .....		5
1	Scope .....	6
2	Normative references .....	7
3	Terms and definitions .....	7
4	Explosion pressure shock resistant equipment .....	7
4.1	General .....	7
4.2	Design procedure .....	8
4.3	Design pressure .....	8
4.4	Design temperature .....	8
4.5	Additional loads .....	9
4.6	Wall thickness allowance .....	9
5	Materials for pressure shock resistant design .....	9
5.1	General .....	9
5.2	Criteria for ductile materials .....	9
5.3	Criteria for brittle materials .....	10
6	Explosion pressure shock resistant design .....	10
6.1	General .....	10
6.2	Design .....	10
6.2.1	Definition of permissible stresses .....	10
6.2.2	Weld seam factor .....	11
6.2.3	Flanges .....	11
6.3	Type testing of pressure shock resistant equipment .....	12
6.3.1	General .....	12
6.3.2	Pressure test .....	12
6.3.3	Explosion test .....	12
6.4	Special requirements for bolted structures .....	13
6.5	Documentation of design and testing of pressure shock resistant equipment .....	13
6.5.1	Documentation of Design by Finite Element Methods .....	13
6.5.2	Documentation of Design by engineering standards .....	14
6.5.3	Documentation of testing .....	14
7	Documentation of quality of explosion pressure shock resistant equipment .....	14
7.1	General .....	14
7.2	Materials .....	14
7.3	Welding .....	15
7.4	Quality test procedure for explosion pressure shock resistant design .....	15
7.4.1	Standard procedure (routine test) .....	15
7.4.2	Alternative procedure in specific cases .....	16
8	Information for use .....	17
8.1	Marking .....	17
8.2	Accompanying documents .....	17
Annex A (informative)	Calculation of design pressure for single vessels .....	19

<b>Annex B (informative) Explosion in pipes and interconnected vessels .....</b>	<b>20</b>
<b>B.1 General .....</b>	<b>20</b>
<b>B.2 Design for the maximum explosion pressure .....</b>	<b>20</b>
<b>B.3 Venting and Suppression .....</b>	<b>20</b>
<b>B.4 Explosions in pipes .....</b>	<b>21</b>
<b>B.5 Use of numerical models for estimating the design pressure .....</b>	<b>21</b>
<b>Annex C (normative) Use of Finite Element Analysis (FEA) for the design of explosion pressure shock resistant equipment .....</b>	<b>23</b>
<b>C.1 Software .....</b>	<b>23</b>
<b>C.2 Validation .....</b>	<b>23</b>
<b>Annex D (informative) Definition of permissible stresses .....</b>	<b>24</b>
<b>D.1 General .....</b>	<b>24</b>
<b>D.2 Verification by Typical Design Rules .....</b>	<b>24</b>
<b>D.3 Yield line method .....</b>	<b>25</b>
<b>D.4 Equivalent Stress Theories .....</b>	<b>26</b>
<b>D.4.1 General .....</b>	<b>26</b>
<b>D.4.2 The "von Mises Theory" .....</b>	<b>26</b>
<b>D.4.3 The "Tresca Theory" .....</b>	<b>27</b>
<b>D.4.4 The "Rankine Theory" .....</b>	<b>27</b>
<b>D.5 Permissible Stress .....</b>	<b>28</b>
<b>Annex E (informative) Examples for limitation of stress concentration .....</b>	<b>29</b>
<b>Annex F (informative) Significant changes between this European Standard and EN 14460:2006 ....</b>	<b>31</b>
<b>Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 2014/34/EU aimed to be covered .....</b>	<b>34</b>
<b>Bibliography .....</b>	<b>35</b>
