

DIN EN 14373:2006-01 (E)

Explosion suppression systems

Contents		Page
Foreword		5
1	Scope	6
2	Normative references	6
3	Terms and definitions	7
4	Explosion suppression	10
4.1	General	10
4.2	Influencing factors	11
4.2.1	General	11
4.2.2	The explosion hazard	11
4.2.3	The explosion suppressant	12
4.2.4	The suppression system	12
4.2.5	Interrelation	12
5	General requirements for explosion suppression components	13
5.1	Detection	13
5.1.1	General	13
5.1.2	Optical detection	13
5.1.3	Pressure detection	13
5.2	Suppressant	13
5.3	HRD-suppressors	14
5.4	Control and Indicating Equipment, CIE	15
6	Requirements for the design of an explosion suppression system	15
6.1	General	15
6.2	Hazard definition	15
6.3	Determination of the pred, max as a function of relevant influencing parameters	16
6.3.1	General	16
6.3.2	Validation by testing in one volume	16
6.3.3	Validation by testing in a second volume	22
6.3.4	Elongated enclosures	22
6.3.5	Pipes	23
6.3.6	Occupied spaces	23
6.4	Validation of system design guidelines	23
6.4.1	General	23
6.4.2	Design nomograph	24
6.4.3	Mathematical model for design	25
6.5	Special applications	26
6.5.1	Suppression combined with venting	26
6.5.2	Venting combined with suppression	27
6.5.3	Suppression combined with reduced oxygen concentrations	27
6.5.4	Partial volumes	27
6.5.5	Segregated volumes	28
6.5.6	Obstructed volumes	28
6.6	Test report	29
7	Safety integrity of explosion suppression systems	30
7.1	General	30
7.2	Measures to avoid and control systematic faults	30

7.3	Control of electric connections	30
7.4	Indicators and messages CIE	30
7.5	Energy supply	31
8	Instructions for installation, commissioning and maintenance	31
8.1	General	31
8.2	Installation of cables	31
8.3	Assembling	31
8.3.1	General	31
8.3.2	Assembly	31
8.4	Commissioning	31
8.4.1	General	31
8.4.2	Commissioning phase	31
8.4.3	Instruction	31
8.4.4	Commissioning report	32
8.4.5	Safety	32
8.5	Maintenance	32
8.5.1	General	32
8.5.2	Servicing	32
9	Marking and packaging	32
9.1	General	32
9.2	Explosion suppression system components	33
9.3	Explosion suppression system	34
9.4	Omission of markings	34
Annex A (informative) Development of nomograph type design guidelines		35
A.1	General	35
A.2	Design nomograph	35
Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 94/9/EC of 23 March 1994		39
Bibliography		42
Figures: Figure 1 -- Pressure behaviour versus time for a normal and suppressed explosion		11
Figure 2 -- Effectiveness of suppressant		14
Figure 3 -- Pressure behaviour and pressure rate of pressure rise versus concentration for a normal and suppressed explosion		17
Figure 4 -- Maximum reduced explosion pressure, pred, max behaviour versus maximum explosion constant, Kmax. 18 Figure 5 -- Maximum reduced explosion pressure, pred, max behaviour versus activation pressure, pa		20
Figure 6 -- Maximum reduced explosion pressure, pred, max behaviour versus number of HRD-suppressors, HRDs20 Figure 7 -- Maximum reduced explosion pressure, pred, max behaviour versus dispersion agent pressure ps		21
Figure 8 -- Design nomograph for a specific explosion suppression system		24
Figure 9 -- Calculated maximum reduced explosion overpressure versus measured maximum reduced explosion overpressure for pred, max values up to 0,5 bar		25
Figure 10 -- Calculated maximum reduced explosion overpressure versus measured maximum reduced explosion overpressure for pred, max values above 0,5 bar		26
Figure 11 -- Example of an enclosure where an explosive concentration prevails only in the lower section		28

Figure A.1-- Design nomograph for a specific explosion suppression system36
Figure A.2 -- Design guideline for a fuel range 37
Figure A.3 -- Volume limits of the design guideline for a fuel range37
