DIN EN 13094:2008-10 (E)

Tanks for the transport of dangerous goods - Metallic tanks with a working pressure not exceeding 0,5 bar - Design and construction

Contents

Page

Foreword 4

1 Scope 5

2 Normative references 5

3 Terms, definitions and symbols 6
3.1 Terms and definitions 6
3.2 Symbols 8

4 Safety device 9

5 Materials 9
5.1 General 9
5.2 Material properties 9
5.2.1 Impact strength 9
5.2.2 Yield strength, tensile strength and elongation after fracture 10
5.3 Compatibility of shell materials with substances carried 11

6 Design 11
6.1 General 11
6.2 Design verification 11
6.3 Shell cross-section 12
6.3.1 For shells of non-circular cross-section: 12
6.4 Dynamic conditions 12
6.5 Pressure conditions 12
6.6 Partial vacuum conditions 13
6.7 Design temperature 13
6.8 Design stress 13
6.9 Shell thickness 13
6.9.1 Minimum shell thickness 13
6.9.2 Reduction of shell thickness 13
6.10 Shell openings, neckrings and closures 16
6.10.1 Inspection openings and manholes 16
6.10.2 Neckrings and closures 17
6.10.3 Cover plates 17
6.10.4 Mountings for service equipment 17
6.11 Shell partitions, surge plates and baffles 17
6.12 Attachments to the shell 17
6.13 Shell supporting structure 18
6.14 Protection of service equipment mounted on the tank top 18
6.14.1 General requirements 18
6.14.2 Minimum requirements 19

7 Manufacture 27
7.1 General 27
7.2 Cutting and edge preparation 27
7.3 Forming 27
7.3.1 General 27
7.3.2 Hot forming 28
7.4 Welding 28

7.4.1 Qualification 28
7.4.2 Welded joints 28
7.4.3 Temporary attachments 29
7.4.4 Examination and testing of welds 29
7.5 Manufacturing tolerances 29
7.5.1 Plate alignment 29
7.5.2 Defects of form 30
7.5.3 Thickness 30
7.5.4 Tank ends 30
7.6 Rectification of defects 30
7.6.1 General requirements 30
7.6.2 Rectification of weld defects 31

Annex A (normative) Methods of design verification 32

A.1 General 32
A.2 Dynamic testing 32
A.3 Finite element stress analysis 33
A.4 Reference design 35
A.5 Calculation method 35

Annex B (normative) Method of measurement of specific resilience 55

B.1 Principle 55
B.2 Apparatus 55
B.3 Samples of materials to be tested 60
B.3 Procedure 62
B.4 Results 63
B.5 Global resilience (see 6.9.2.2 i)) 63

Annex C (normative) Design of neckrings, flanges and closures 65

Annex D (informative) Examples of welding details 66

D.1 General 66
D.2 Tank construction 66
D.3 Attachment of reinforcements 82
D.4 Attachment of branches 84
D.5 Attachment of flanges, collars and reinforcing pads to the shell 88
D.6 Attachment of flanges onto branches 90
D.7 Attachment of heating channels to shells 92

Bibliography 94
