DIN EN 14620-4:2006-12 (E)

Design and manufacture of site built, vertical, cylind rical, flat-bottomed steel tanks for the storage of refrigerated, liquefied gases with operating temperatures between 0 °C and -165 °C - Part 4: Insulation components

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 6

4 Design requirements, performance characteristics, testing and selection of insulating materials 6
4.1 General 6
4.2 Analysis of design requirements 6
4.3 Assessment of the performance characteristics 7
4.4 Testing of materials and systems 10

5 Protection of insulation - water vapour barrier 11
5.1 General 11
5.2 Protective structure formed by the outer tank 11
5.3 Protective cover for external insulation 11

6 Design of insulation system 12
6.1 General 12
6.2 Thermal design 12
6.3 Structural design 13
6.4 Insulation for each tank component 15
6.5 Design for different types of containment 19

7 Installation 19
7.1 Introduction 19
7.2 General requirements 19
7.3 Inspection and testing 20

Annex A (informative) Insulation materials 21

Annex B (normative) Test methods 24

Annex C (normative) Tank bottom insulation - Limit state theory 29

Bibliography 31

Tables Table A.1 -- Single and double containment tanks 21

Table A.2 -- Full containment tanks 22

Table A.3 -- Membrane tanks 23

Table B.1 -- Testing thermal resistance properties 24

Table B.2 -- Testing mechanical properties 25

Table B.3 -- Testing temperature resistance 26

Table B.4 -- Testing permeability for/effects of water and water vapour properties 26

Table B.5 -- Testing of material behaviour in presence of product 27

Table B.6 -- Testing chemical properties 27

Table B.7 -- Testing fire resistance/reaction to fire 28
