ISO 3966:2008-07 (E)

Measurement of fluid flow in closed conduits - Velocity area method using Pitot static tubes

Contents

Page

Foreword iv

1 Scope 1

2 Normative references 1

3 Symbols and definitions 2

4 Principle 4

5 Design of Pitot tubes 7

6 Requirements for use of Pitot tubes 8

7 Positioning of Pitot tube 11

8 Velocity computation 11

9 Determination of the discharge velocity by graphical integration of the velocity area 14

10 Determination of the discharge velocity by numerical integration of the velocity area 17

11 Determination of the discharge velocity by arithmetical methods 19

12 Corrections of local velocity measurements 23

13 Errors 28

Annex A (normative) Pitot tubes 34

Annex B (normative) Correction to the measuring position of Pitot tubes used in a transverse velocity gradient 39

Annex C (normative) Study concerning turbulence correction 41

Annex D (normative) Damping of pressure gauges 44

Annex E (normative) Measurements with a Pitot tube in a compressible fluid 46

Annex F (normative) Determination of coefficient m for extrapolation near the wall 50

Annex G (normative) Example of calculation of the uncertainty on the flow-rate measurement by means of Pitot tubes 51
