

DIN EN ISO 20456:2020-09 (E)

Measurement of fluid flow in closed conduits - Guidance for the use of electromagnetic flowmeters for conductive liquids (ISO 20456:2017)

Contents		Page
European foreword		4
Foreword		5
Introduction		6
1	Scope	7
2	Normative references	7
3	Terms and definitions	7
4	Symbols	9
5	Theory and basic formulae	10
6	Construction and principle of operation	10
6.1	General	10
6.2	Sensor	11
6.3	Transmitter	13
6.3.1	General	13
6.3.2	Alternating magnetic field in the measuring system	13
6.3.3	Measuring system with applied pulsed DC excitation (simplified model)	13
6.3.4	Measuring system with applied AC excitation (simplified model)	14
6.4	Flowmeter/Transmitter output	15
7	Equipment marking	15
7.1	Recommended data	15
7.1.1	Sensor	15
7.1.2	Transmitter	16
8	Installation design and practice	16
8.1	Sensor	16
8.1.1	Sizing	16
8.1.2	Mounting conditions	17
8.1.3	Potential equalization — General requirements	18
8.1.4	Electrical connections	19
8.1.5	Sensor mounting	19
8.1.6	Installation dimensions for flanged connections	20
8.2	Transmitter location	21
8.3	Operational considerations	22
8.3.1	General	22
8.3.2	Effect of the liquid conductivity	22
8.3.3	Reynolds number effect	22
8.3.4	Velocity profile effect	22
9	Flowmeter calibration, validation, and verification	22
9.1	Flowmeter calibration	22
9.2	Flowmeter verification (<i>in-situ</i> electronic verification)	22
10	Evaluation of flowmeter performance	23
10.1	General	23
10.2	Applications within the scope of other standards	23
11	Uncertainty analysis	23

Annex A (informative) Materials for construction of sensors	25
Annex B (informative) Practical considerations for measuring system with AC and DC excitation	28
Annex C (informative) Cathodic protection	29
Annex D (informative) Conversion of nominal diameters from metric to US units	30
Annex E (informative) Manufacturers' accuracy specifications	31
Bibliography	35
