ISO 21204:2020-02 (E)

Geometrical product s pecifications (GPS) - Transition specification

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Basic concepts 2

5 General indication rules 4
5.1 Symbols 4
5.2 Indications using the transition specification symbol 5
5.2.1 General 5
5.2.2 Indications in face view 6
5.2.3 Indications in 3D 6
5.3 Indication areas around the transition specification symbol 7

6 Circular edge transition feature indications 7
6.1 Fixed radius profile specification 7
6.2 Variable radius profile specification 8
6.3 Consistent radius profile specification 9
6.4 Maximum material radius boundary specification 10
6.5 Least material radius boundary specification 10
6.6 Maximum material radius boundary with profile specification 11
6.7 Least material radius boundary with profile specification 12
6.8 Combined maximum material and least material radius boundary specification 13

7 Chamfer edge transition feature indications 14
7.1 Fixed chamfer profile specification 14
7.2 Variable chamfer profile specification 17
7.3 Consistent chamfer profile specification 18
7.4 Maximum material chamfer boundary specification 19
7.5 Least material chamfer boundary specification 20
7.6 Maximum material chamfer boundary with profile specification 21
7.7 Least material chamfer boundary with profile specification 22
7.8 Combined maximum material and least material chamfer boundary specification 23

8 Elliptical edge transition feature indications 24
8.1 Fixed elliptical profile specification 24
8.2 Variable elliptical profile specification 25
8.3 Consistent elliptical profile specification 26
8.4 Maximum material elliptical boundary specification 26
8.5 Least material elliptical boundary specification 27
8.6 Maximum material elliptical boundary with profile specification 28
8.7 Least material elliptical boundary with profile specification 29
8.8 Combined maximum material and least material elliptical boundary specification 30

9 Edge transition feature defined by CAD 31
9.1 CAD profile specification 31

9.2 Maximum material CAD profile boundary specification 32
9.3 Least material CAD profile boundary specification 33
9.4 Maximum material CAD profile boundary with profile specification 34
9.5 Least material CAD profile boundary with profile specification 35

10 Rules for supplemental indications 36
10.1 Symbols 36
10.2 Limits of different nominal shapes 36
10.3 Extent of the toleranced feature 37
10.4 Tolerance zone offset 37
10.5 Indication of primary adjacent reference section 38
10.6 Indication of several toleranced features 38
10.7 Indications using the between symbol 38
10.8 Around a feature indications 39
10.9 General transition specifications 40

Annex A (informative) Algorithm for defining extended edge transition sections and adjacent reference sections 41

Annex B (informative) Example of approximately equivalent specification of extended edge transition features 48

Annex C (normative) Relations and dimensions of graphical symbols 50

Annex D (informative) Relation to the GPS matrix model 51

Bibliography 52
