Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle 4

5 Sampling 4

6 General testing conditions 5
6.1 General 5
6.2 Staff 5
6.3 Premises 5
6.4 Apparatus and consumables (excluding reagents) 5
6.5 Reagents 6
6.6 Decontamination of equipment and premises 8
6.7 Treatment and elimination of waste 8

7 Procedure 8
7.1 Concentration 8
7.2 DNA extraction 8
7.3 DNA amplification by PCR 9
7.4 Quantitative detection 10

8 Expression of the results 12

9 Test report 12

10 Technical protocol for the characterization and the validation of the method 13
10.1 General 13
10.2 Inclusivity and exclusivity of probes and primers 14
10.3 Verification of the calibration function of the quantitative PCR phase 14
10.4 Verification of the PCR limit of quantification, LQqPCR 19
10.5 Verification of the PCR limit of detection (LDqPCR) 21
10.6 Recovery method 21
10.7 Robustness 22
10.8 Measurement uncertainty of the whole method 23

11 Quality controls 23
11.1 General 23
11.2 Connecting the calibration solution and the reference material to the primary standard
24 11.3 Monitoring of the performances 26
11.4 Positive and negative controls of the method 26
11.5 PCR reagent blank 26

11.6 Inhibition control 26

Annex A (informative) Example of protocol for producing a quantitative standard DNA solution 29

Annex B (informative) Example of method for determining the cycle threshold 30

Annex C (informative) Example of a study of the quantitative PCR phase calibration function 32

Annex D (informative) Specific Student distribution 35

Annex E (informative) Example of recovery evaluation 36

Annex F (informative) Example of overall uncertainty evaluation 37

Annex G (normative) Evaluation of the performances of a third party validated method 38

Bibliography 39
