ISO/TS 24522:2019 (E)

Event detection process: Guidelines for water and wastewater utilities

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principles of an event detection process

4.1 Design phase
4.1.1 General
4.1.2 Influence matrix table and EDP
4.1.3 EDP inputs
4.1.4 EDP design
4.1.5 EDP target service level design
4.2 Detection phase
4.2.1 General
4.2.2 Validation process
4.2.3 Further event monitoring
4.3 Ongoing activities
4.3.1 Post-event EDP evaluation
4.3.2 Periodic reviews
4.3.3 Validation of links between phenomena and risk materialization
4.3.4 Estimation
4.3.5 Decision-making
4.3.6 Guidance on interpretation

5 The event detection cycle and the role of the EDP

5.1 The EDP's application of the event detection cycle (the EDP cycle)
5.2 Development and regular review of an EDP-based event detection capability
5.2.1 General
5.2.2 Listing of possible event indicators
5.2.3 IMT establishment
5.2.4 EIT establishment
5.2.5 IMT and EIT periodic review
5.3 Deployment of an event detection procedure
5.3.1 General
5.3.2 Defining the possibility of an event's occurrence
5.3.3 Nature of water/wastewater measurement sampling considerations
5.3.4 Results assessment
5.3.5 Missing inputs
5.3.6 Unfamiliar combination of inputs
5.3.7 Deviation from normal frequency detection
5.3.8 Measurement grouping
5.4 Classification of events and evaluation of the classification procedure
5.4.1 General
5.4.2 Process-based classification
5.4.3 Actual classification
5.4.4 Assignment of weights
5.4.5 Frequency calculations
5.4.6 Classification efficiency estimation
5.4.7 Classification evaluation
5.5 Notification to relevant personnel/systems

5.6 Documentation of events
5.6.1 General
5.6.2 Time stamps
5.6.3 Subsequent documentation
5.6.4 Responsible person documentation
5.6.5 Documentation authority
5.6.6 Data security
5.7 Validation process — Periodic evaluation of the detection process
5.7.1 General
5.7.2 Confidence-level assignment
5.8 Periodic system evaluation — System functionality
5.9 EDP development — General principles and governance
5.9.1 EDP operation
5.9.2 Access to the EDP
5.9.3 User training and qualification
5.9.4 Testing and certification
5.9.5 EDP output expression
5.9.6 EDP output presentation

Annex A (informative) Examples of typical event indicators that could be used as EDP inputs

A.1 General
A.2 Potential event indicators — Water
A.3 Potential event indicators — Wastewater
A.4 Examples of detection methodologies, monitoring, processes and test methods
A.4.1 Examples primarily for drinking water
A.4.1.1 General
A.4.1.2 Toxicity monitoring
A.4.1.3 Bulk parameter monitoring
A.4.1.4 Gas chromatography
A.4.1.5 Ultraviolet absorbance and fluorescence
A.4.1.6 Optical methods
A.4.1.7 Tests for microbial indicators of contamination
A.4.1.8 Tests for specific chemicals or pathogens
A.4.1.9 Syndromic surveillance
A.4.2 Examples primarily for wastewater
A.4.2.1 General
A.4.2.2 Flow
A.4.2.3 Toxicity
A.4.2.4 Dissolved oxygen (DO)
A.4.2.5 Respirometery
A.4.2.6 Oxidizible material: biological oxygen demand (BOD), chemical oxygen demand (COD) and total organic carbon (TOC)
A.4.2.7 Nutrients
A.4.2.8 Bulk parameter monitoring

Annex B (informative) Influence matrix table (IMT)

B.1 General
B.2 IMT structure
B.3 Examples for drinking water and wastewater
B.3.1 Simulation system to predict a water source pollutant's arrival time at an intake
B.3.1.1 General
B.3.1.2 Simulation system principle
B.3.1.3 Simulation system practical use
B.3.2 Simulation system to predict the rainwater inflow amount to a wastewater system
B.3.2.1 General
B.3.2.2 Simulation system principle
B.3.2.3 Simulation system practical use

Annex C (informative) Event identification table (EIT)

C.1 General
C.2 EIT structure
C.3 Examples of preliminary conclusions drawn
C.3.1 General
C.3.2 Example 1

C.3.3 Example 2
C.3.4 Example 3
C.4 Measurements of change
C.4.1 General
C.4.2 Manual sampling versus automatic sampling
C.4.3 Site selection
C.4.4 Frequency of monitoring
C.4.5 Importance of baseline
C.4.6 Recommended parameters for drinking water
C.4.7 Recommended parameters for wastewater

Annex D (informative) Examples of statistical methods for the evaluation of event classification within the EDP

D.1 General
D.2 Types of event
D.3 Event identification
D.3.1 General
D.3.2 Simple level
D.3.3 Intermediate level
D.3.4 Sophisticated level
D.4 Event classification by similarity
D.5 Numerical example for similarity calculations
D.6 Human classification and quality of detection

Annex E (informative) Signal measurements' grouping

E.1 General
E.2 Nearest neighbour
E.3 Local density
E.4 Numerical prediction

Annex F (informative) Verifying the EDP’s response to potential types of events

F.1 The importance of verification testing
F.2 Verifying the integrity of data streams
F.2.1 General
F.2.2 Verifying the integrity of data streams for traditional online water quality physical and chemical sensors
F.2.3 Verifying the integrity of data streams from laboratory or field analysis
F.2.4 Verifying the integrity of data streams from non-traditional sources (e.g. hospital admissions, emergency service calls, pharmacy sales, customer complaints)
F.3 Verifying EDPs through the use of artificial data file
F.4 Verifying EDPs through the introduction of surrogate test agents

Annex G (informative) Classification of potential events detected

G.1 General
G.2 Determining if a detected event is worthy of investigation
G.3 The sensor system
G.4 The sampling system
G.5 Laboratory test
G.6 Reference to upstream and downstream monitoring stations
G.7 The event detection system
G.8 Classifying possible water-quality causes of a detected event
G.8.1 Operational causes
G.8.2 Forensic analysis of unknown event causes
G.8.2.1 General
G.8.2.2 Rapid field screening of samples
G.8.2.3 Laboratory testing of samples

Annex H (informative) Event classification performance guide

H.1 General
H.2 Event classification definition
H.2.1 General
H.2.2 Event end status
H.2.3 Event credibility
H.2.4 Event severity

H.2.5 Event possible causation
H.2.6 Classification rules
H.3 Learning policy
H.4 Unclassified events
H.5 Classification review
H.6 Events' early classification
