ISO/TS 24541:2020 (E)

Service activities relating to drinking water supply, wastewater and stormwater systems — Guidelines for the implementation of continuous monitoring systems for drinking water quality and operational parameters in drinking water distribution networks

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principles

5 Considerations for the justification of need for continuous monitoring

- 5.1 General
- 5.2 Cost-benefit
- 5.3 Risks of continuous monitoring
- 5.4 Local contexts

6 Choosing parameters to be monitored

7 Locating the continuous monitoring stations in the drinking water distribution network

- 7.1 General
- 7.1.1 Network layout
- 7.1.2 Development or implementation of an existing hydraulic or statistical model of the drinking water distribution network (preferred)
- 7.1.3 The pragmatic approach
- 7.2 Locations for monitoring stations
- 7.2.1 General
- 7.2.2 The pragmatic approach
- 7.2.3 The hydraulic model approach
- 7.3 Network alert definition
- 7.4 Decision support tools
- 7.5 Periodic evaluation of the continuous monitoring system

8 Installation, maintenance, operation, calibration and data transmission of MDs

- 8.1 Installation considerations
- 8.1.1 General
- 8.1.2 Geographical location
- 8.1.3 Site installation location
- 8.2 Maintenance and operational considerations
- 8.3 Calibration considerations
- 8.4 Communication considerations

Annex A (informative) Examples of positives and negatives of continuous monitoring systems

Annex B (informative) Examples of commonly deployed drinking water quality parameter measuring devices

- B.1 General
- B.2 Measuring device for continuous measurement of disinfectant in drinking water
- B.3 Measuring device for continuous measurement of turbidity in drinking water

B.4 Measuring device for continuous measurement of the number and size distribution of suspended particles in drinking water
B.5 Continuous drinking water pH measuring device
B.6 Measuring device for continuous measurement of the electrical conductivity of drinking water
B.7 Measuring device for the analysis of total organic carbon concentration in drinking water
B.8 Scanning or multiple wavelength UV measuring devices
B.9 Oxidation reduction potential measuring devices
B.10 Spectrophotometric colour measuring devices
B.11 Bioassay measuring devices for toxicity
B.12 Other less common methods that have been used

Annex C (informative) Evaluation of the performance of measuring devices

C.1 General
C.2 Testing
C.3 Approval arrangements
