ISO/TR 20736:2021 (E)

Sludge recovery, recycling, treatment and disposal — Guidance on thermal treatment of sludge

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Abbreviated terms

5 Sludge properties

- 5.1 General
- 5.2 Physico-chemical characteristics
- 5.2.1 General
- 5.2.2 Dry matter
- 5.2.3 Loss on ignition
- 5.2.4 Calorific value
- 5.2.5 Grease, scum and screening
- 5.2.6 Physical consistency and others
- 5.3 Chemical and microbiological characteristics
- 5.3.1 General
- 5.3.2 Sulfur
- 5.3.3 Phosphorus
- 5.3.4 Nitrogen
- 5.3.5 Chlorine and other halogens
- 5.3.6 Organic micro pollutants
- 5.3.7 Trace elements
- 5.3.8 Pathogens

6 Thermal processes fundamentals

- 6.1 General
- 6.2 Drying
- 6.3 Hydrolysis
- 6.4 Incineration
- 6.5 Pyrolysis
- 6.6 Gasification
- 6.7 Thermolysis
- 6.8 Carbonization
- 6.9 Wet oxidation
- 6.10 Melting
- 6.11 Pasteurization

7 Technologies

- 7.1 General
- 7.2 Drying
- 7.2.1 Direct dryers
- 7.2.2 Indirect dryers
- 7.2.3 Solar dryers
- 7.3 Hydrolysis
- 7.4 Incineration
- 7.4.1 Fluidized bed furnace

7.4.2 Multiple hearth furnace (MHF)
7.4.3 Hybrid furnace
7.4.4 Others
7.5 Pyrolysis
7.6 Gasification
7.7 Thermolysis
7.8 Carbonization
7.9 Wet oxidation
7.10 Melting
7.11 Pasteurization
7.12 Emerging technologies
7.12.1 General
7.12.2 Oxidation technologies
7.12.2.1 Supercritical water
7.12.2.2 Wet peroxide oxidation
7.12.3 Enzymatic sludge hydrolysis
7.12.4 Plasma gasification
7.12.5 Ultrasound pretreatment
7.12.6 Microwave irradiation
7.12.7 Infrared radiation
7.13 Design aspects
7.14 Auxiliary equipment
7.14.1 General
7.14.2 Transport, receiving area, storage and feeding systems
7.14.3 Heat supply and recovery
7.14.3.1 General
7.14.3.2 Heat exchangers
7.14.3.3 Boiler
7.14.4 Gas cleaning
7.14.5 Ash and other residues handling
7.14.6 Wastewater treatment
7.14.7 Process monitoring
7.14.8 Safety systems

8 Operational aspects

8.1 General
8.2 Drying
8.3 Hydrolysis
8.4 Incineration
8.4.1 General
8.4.2 Fluidized bed furnace
8.4.3 Multiple hearth furnace
8.5 Pyrolysis
8.6 Gasification
8.7 Thermolysis
8.8 Carbonization
8.9 Wet oxidation
8.10 Melting
8.11 Pasteurization
8.12 Hazards

9 Management of energy and secondary resources

9.1 General
9.2 Drying
9.3 Hydrolysis
9.4 Incineration
9.5 Pyrolysis
9.6 Gasification
9.7 Thermolysis
9.8 Carbonization
9.9 Wet oxidation
9.10 Melting
9.11 Pasteurization
9.12 Thermal treatments and circular economy

10 Management of residues

10.1 General
10.2 Flue gas
10.2.1 Characteristics and parameters
10.2.2 Equipment
10.3 Ashes
10.3.1 Composition/parameters
10.3.2 Processes and equipment
10.4 Wastewater

11 Decommissioning of installations

11.1 General
11.2 Specific considerations

12 Co-management with other organic wastes

12.1 General
12.2 Specific considerations
12.3 Additional storage and transport aspects
12.3.1 General
12.3.2 Storage
12.3.3 Transport

13 Assessment of sustainability

13.1 General
13.2 Environmental aspects
13.3 Economical aspects
13.4 Social aspects

Annex A (informative) Calorific values calculations

Annex B (informative) Various systems to input sludge into a household waste incineration plant

B.1 General
B.2 Sludge whose DM content < 35 %
B.3 Sludge whose dryness is > 65 %
B.4 Sludge whose DM content is between 35 % and 65 %
B.5 Drying the sludge in the household waste incineration plant

Annex C (informative) Case studies

C.1 Incineration
C.1.1 Pressurized fluidized bed incineration system
C.1.1.1 Background and results
C.1.1.2 Description
C.1.2 Sewage Sludge Fluid Bed Incineration with co-Generation
C.1.2.1 Background and results
C.1.2.2 Description
C.1.3 Multiple layer burning incineration system
C.1.3.1 Background and results
C.1.3.2 Description
C.1.4 Advanced two-stage incinerator (circulating fluidized bed)
C.1.4.1 Background and results
C.1.4.2 Description
C.1.5 Sewage sludge FBF plus binary power generation system
C.1.5.1 Background and results
C.1.5.2 Description
C.1.6 Step grate furnace with steam power generation
C.1.6.1 Background and results
C.1.6.2 Description
C.1.7 Steam power generation system combining advanced dehydrator and the grate furnace
C.1.7.1 Background and results
C.1.7.2 Description
C.2 Gasification (sewage sludge gasification power-generation system)
C.2.1 Background and results
C.2.2 Description

C.3 Carbonization
C.3.1 Sludge carbonization (sludge to bio charcoal fuel)
C.3.1.1 Background and results
C.3.1.2 Description
C.3.2 Sewage sludge fluidized bed carbonization system
C.3.2.1 Background and results
C.3.2.2 Description
C.4 Drying
C.4.1 Low energy sludge drying system
C.4.1.1 Background and results
C.4.1.2 Description
C.4.2 Solar drying
C.4.2.1 Background and results
C.4.2.2 Description

Annex D (informative) Regulatory aspects

Page count: 90
