ISO/TS 5594:2022-11 (E)

Soil and water quality - Guidance and requirements for designing an interlaboratory trial for validation of biotests

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Principle 3

5 Requirements, design and organization of method validation testing round(s) 4
5.1 General 4
5.2 Prevalidation -- Minimum requirements of test method performance 4
5.3 First validation step -- Demonstration of participating laboratories' readiness for testing 5
5.4 Second validation step -- Demonstration of laboratory capability and transferability of the biotest 5
5.5 Third validation step -- Method validation 6
5.5.1 General 6
5.5.2 Participating laboratories 6
5.5.3 Samples 6
5.5.4 Experimental design 7
5.5.5 Supporting information for participants 7
5.5.6 Data analysis and statistical evaluation of interlaboratory testing 8

6 Assessment 8

7 Documentation and reporting 9

Annex A (informative) Determination of accuracy (trueness and precision) in case the results of ecotoxicity tests are expressed as toxicity metrics 10

Annex B (informative) Estimation of the repeatability standard deviation 15

Annex C (informative) Calculation and reporting of uncertainty of sR 17

Annex D (informative) Validation schema 19

Annex E (informative) Questionnaire (example) 20

Annex F (informative)Specificfeaturesofterrestrialbiotestswhicharerecommendedto be addressed by lead laboratories 22

Annex G (informative)Specificfeaturesofwaterbiotestswhicharerecommendedtobe addressed by lead laboratories 25

Annex H (informative) Summary of interlaboratory trials performed within the validation of terrestrial biotests 27

Annex I (informative) Summary of interlabor atory trials perform ed within the validation of water biotests 33
