## Hydrometry - Calibration of current-meters in straight open tanks

---

| <b>Contents</b> |   | <b>Page</b> |
|-----------------|---|-------------|
| Foreword .....  |   | iv          |
| 1               | Scope .....   | 1           |
| 2               | Normative reference .....                                 | 1           |
| 3               | Terms and definitions .....                               | 1           |
| 4               | Principle of calibration .....                            | 1           |
| 5               | Design criteria for calibration stations .....            | 1           |
| 5.1             | Dimensions of rating (calibration) tank .....             | 1           |
| 5.2             | Rating carriage (trolley) .....                           | 3           |
| 5.3             | Measuring equipment .....                                 | 4           |
| 5.4             | Other requirements .....                                  | 5           |
| 6               | Computerized data acquisition and processing system ..... | 6           |
| 6.1             | Data acquisition .....                                    | 6           |
| 6.2             | Data processing .....                                     | 6           |
| 7               | Calibration procedure .....                               | 7           |
| 7.1             | Calibration of rotating-element current-meters .....      | 7           |
| 7.2             | Calibration of electromagnetic meters .....               | 13          |
