ISO 5667-20:2008-03 (E)

Water quality - Sampling - Part 20: Guidance on the use of sampling data for decis ion making - Compliance with thresholds and classification systems

Contents

Page

Foreword iv

Introduction vi

1 Scope 1

2 Summary of key points 1

3 Types of error and variation 2
3.1 General 2
3.2 Analytical error 3
3.3 Overall uncertainty 3

4 Activities 4
4.1 Estimation of summary statistics 4
4.2 Thresholds for water quality and compliance 6
4.3 Confidence of failure 7
4.4 Methods for thresholds expressed as percentiles 7
4.5 Non-parametric methods 10
4.6 Look-up tables 13

5 Definition of thresholds 14
5.1 General 14
5.2 Ideal thresholds 14
5.3 Absolute limits 15
5.4 Percentage of failed samples 18
5.5 Calculating limits for effluent discharges 18

6 Declaring that a substance has been detected 19

7 Detecting change 20

8 Classification 23
8.1 General 23
8.2 Confidence that class has changed 25

Annex A (informative) Calculation of confidence limits 27

Annex B (informative) Calculation for the binomial distribution 29

Annex C (informative) Sample results with high error or reported as less than a limit of detection 32

Bibliography 34
