Foreword iv

1 Scope 1

2 Normative references 1

3 Terms, definitions, symbols and abbreviations 2
3.1 Terms and definitions 2
3.2 Symbols and abbreviations 6

4 General requirements 9
4.1 Materials 9
4.2 Appearance 10
4.3 Reference conditions for testing 10
4.4 Joints 10

5 Pipes 11
5.1 Classification 11
5.2 Designation 12
5.3 Geometrical characteristics 12
5.4 Mechanical characteristics 20
5.5 Marking of pipes 24

6 Fittings 24
6.1 General 24
6.2 Bends 25
6.3 Branches 28
6.4 Marking of fittings 30

7 Joint performance 30
7.1 General 30
7.2 Requirements 30

Annex A (normative) Test method for the determination of a pipe's crushing strength and ring bending tensile strength using a pipe test piece 34

Annex B (normative) Test method for the determination of a pipe's crushing strength or ring bending tensile strength using test pieces sawn from a pipe 42

Annex C (normative) Test methods for the assessment of longitudinal bending moment resistance 48

Annex D (normative) Test method for the determination of the compressive strength of polyester resin concrete (PRC) using test pieces cut from a pipe 54

Annex E (normative) Test method for the determination of the fatigue strength of a pipe under cyclic loading 58

Annex F (normative) Method for the assessment of the leaktightness of a pipe and its joints under short-term exposure to internal water pressure 63

Annex G (normative) Test method for the determination of the long-term (50 years) crushing strength of a pipe, including the effects of media attack 65
