DIN EN ISO 18365:2014-04 (E)

Hydrometry - Selection, establishment and operation of a gauging station (ISO 18365:2013)

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms, definitions and symbols 4

4 General requirements and considerations 4
4.1 Requirements 4
4.2 Other constraints 5

5 Water level (Stage) only gauging stations 5
5.1 Preliminary survey and selection criteria 5
5.2 Stage measurement and recording 6

6 Stage-discharge gauging stations 7
6.1 General 7
6.2 Main elements of a stage-discharge gauging station 8

7 Stage-discharge gauging stations using hydraulic structures 9
7.1 General 9
7.2 Site selection 9
7.3 Types of hydraulic structures 9

8 Velocity-discharge gauging stations 10
8.1 Applications and types of instrument 10
8.2 Site selection 11
8.3 Calibration 11
8.4 Transit time (acoustic) method 11
8.5 Doppler 12
8.6 Acoustic (echo) correlation velocity meters 13
8.7 Electromagnetic method (Full channel width coil) 13

9 Measurement under difficult conditions 13
9.1 Ice and frost conditions 13
9.2 Weed growth 14
9.3 Extreme sedimentation conditions 14

10 Operation and maintenance 14
10.1 General 14
10.2 Water level (Stage) only gauging stations 14
10.3 Stage-discharge gauging stations 15
10.4 Stage-discharge gauging stations using hydraulic structures 15
10.5 Velocity-discharge gauging stations 15

Annex A (informative) Applicable conditions for selection of discharge measurement method 16
