DIN EN 16695:2015-12 (E)

Water quality - Guidance on the estimation of phytoplankton biovolume

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 5

5 Equipment and preservatives 6

6 Procedure 7
6.1 Sampling and sample preparation 7
6.2 Calibration of the eyepiece micrometre, counting-graticule and image analysis software 7
6.3 Statistical requirements for determination 8
6.4 Measurement 9
6.4.1 General 9
6.4.2 Using size classes based on representative measurements 10
6.4.3 How to deal with hidden dimensions 10
6.4.4 Measurement of filamentous taxa 10
6.4.5 Measurement and counting of colony- and coenobium-forming taxa 11
6.4.6 Measurement of complex geometrical shapes 12
6.5 Calculation of biovolume 12
6.6 Biovolume biomass relations 13
6.7 Reporting 13

7 Quality Assurance 13

Annex A (informative) List of geometrical shapes 14

Annex B (informative) Performance data 23

Annex C (informative) Carbon content calculation 28

Annex D (informative) Alphabetical list of recommended geometrical shapes and hidden dimension factors 30

Annex E (informative) Example: Genus-specific instruction for measurement of dimensions 96
