

DIN EN 16695:2015-12 (E)

Water quality - Guidance on the estimation of phytoplankton biovolume

Contents		Page
European foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Principle	5
5	Equipment and preservatives	6
6	Procedure	7
6.1	Sampling and sample preparation	7
6.2	Calibration of the eyepiece micrometre, counting-graticule and image analysis software ...	7
6.3	Statistical requirements for determination	8
6.4	Measurement	9
6.4.1	General	9
6.4.2	Using size classes based on representative measurements	10
6.4.3	How to deal with hidden dimensions	10
6.4.4	Measurement of filamentous taxa	10
6.4.5	Measurement and counting of colony- and coenobium-forming taxa	11
6.4.6	Measurement of complex geometrical shapes	12
6.5	Calculation of biovolume	12
6.6	Biovolume biomass relations	13
6.7	Reporting	13
7	Quality Assurance	13
Annex A (informative) List of geometrical shapes		14
Annex B (informative) Performance data		23
Annex C (informative) Carbon content calculation		28
Annex D (informative) Alphabetical list of recommended geometrical shapes and hidden dimension factors		30
Annex E (informative) Example: Genus-specific instruction for measurement of dimensions		96
Bibliography		99
