

DIN EN 16695:2015-12 (E)

Water quality - Guidance on the estimation of phytoplankton biovolume

Contents	Page
European foreword	3
Introduction	4
1 Scope	5
2 Normative references	5
3 Terms and definitions	5
4 Principle	5
5 Equipment and preservatives	6
6 Procedure	7
6.1 Sampling and sample preparation	7
6.2 Calibration of the eyepiece micrometre, counting-graticule and image analysis software ..	7
6.3 Statistical requirements for determination	8
6.4 Measurement	9
6.4.1 General	9
6.4.2 Using size classes based on representative measurements	10
6.4.3 How to deal with hidden dimensions	10
6.4.4 Measurement of filamentous taxa	10
6.4.5 Measurement and counting of colony- and coenobium-forming taxa	11
6.4.6 Measurement of complex geometrical shapes	12
6.5 Calculation of biovolume	12
6.6 Biovolume biomass relations	13
6.7 Reporting	13
7 Quality Assurance	13
Annex A (informative) List of geometrical shapes	14
Annex B (informative) Performance data	23
Annex C (informative) Carbon content calculation	28
Annex D (informative) Alphabetical list of recommended geometrical shapes and hidden dimension factors	30
Annex E (informative) Example: Genus-specific instruction for measurement of dimensions	96
Bibliography	99
