ISO 9644:2018 (E)

Agricultural irrigation equipment — Pressure losses in irrigation valves — Test method

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Test installation

- 4.1 Permissible deviation of measuring devices
- 4.2 Test equipment
- 4.2.1 Piping
- 4.2.2 Throttling valve
- 4.2.3 Flow measuring device
- 4.2.4 Pressure differential measuring device
- 4.2.5 Pressure taps
- 4.2.6 Temperature sensors
- 4.2.7 Filtration

5 Test procedure

- 5.1 Test installation
- 5.2 Test conditions
- 5.2.1 Permissible fluctuations in measurements
- 5.2.2 Steady conditions
- 5.2.3 Unsteady conditions
- 5.3 Test bench pressure loss
- 5.4 Test of valve

6 Test results

- 6.1 Presentation of test results
- 6.2 Calculated valve coefficients
- 6.2.1 General
- 6.2.2 Flow resistance coefficient, ζ
- 6.2.3 Valve flow coefficient, Kv
- 6.3 Test report

Annex A (informative) Measurement uncertainty

- A.1 Overview
- A.2 Permissible measurement fluctuations
- A.2.1 General
- A.2.2 Direct visual observation of signals delivered by the systems
- A.2.3 Automatic recording of signals delivered by measurement systems
- A.2.4 Automatic integration of signals delivered by the measurement systems
- A.3 Measured value stability on physical quantities
- A.4 Determining flow rate and pressure loss coefficients in turbulent rating condition

Annex B (informative) Evaluation of uncertainty of flow rate coefficient, Kv, and pressure losses coefficient, ζ

- B.1 Generality
- B.2 Evaluation of measurement uncertainty of the Kv (Cv)
- B.2.1 Determination of flow rate coefficient
- B.2.2 Identification of uncertainty of input quantities
- B.2.3 Sensitivity coefficient

B.2.4 Type A evaluation uncertainty
B.2.5 Expression of relative uncertainty
B.3 Evaluation of measurement uncertainty of the ζ
B.3.1 Determination of flow resistance coefficients
B.3.2 Identification of uncertainty of input quantities
B.3.3 Sensitivity coefficient
B.3.4 Type A evaluation uncertainty
B.4 Expression of relative uncertainty on ζ
