ISO 10634:2018 (E)

Water quality — Preparation and treatment of poorly water-soluble organic compounds for the subsequent evaluation of their biodegradability in an aqueous medium

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Presentation of suitable preparation and analytical methods

4.1 Preparation methods
4.2 Analytical methods

5 Direct addition and addition with inert support

5.1 General
5.2 Reagents
5.3 Apparatus
5.4 Procedure
5.4.1 Direct addition
5.4.2 Addition on inert support
5.4.2.1 Solid test compound
5.4.2.2 Liquid test compound

6 Ultrasonic and physical treatment

6.1 General
6.2 Apparatus
6.3 Procedure using an ultrasonic probe
6.3.1 Preparation of the test compound
6.3.1.1 Preparation of a stock solution
6.3.1.2 Preparation with the required quantity
6.3.2 Experimental protocol
6.4 Procedure using an ultrasonic bath
6.5 Other methods

7 Adsorption on an inert support with a volatile solvent removed from the system

7.1 General
7.2 Reagents
7.3 Apparatus
7.4 Procedure

8 Addition with a non-biodegradable solvent or emulsifying agent

8.1 General
8.2 Reagents
8.3 Apparatus

9 Preliminary tests

9.1 Reagents
9.1.1 Selection of emulsifying agent concentration
9.1.2 Selection of mineral oil concentration
9.1.3 Selection of silicone oil concentration
9.2 Procedure

9.2.1 Use of solvent
9.2.2 Use of emulsifying agent
9.2.3 Use of mineral oil
9.2.4 Use of silicone oil
9.3 Other additives

10 Combination of methods

11 Test report

Annex A (informative) Examples of biodegradability curves
