ISO 15886-4:2019 (E)

Irrigation equipment — Irrigation sprinklers — Part 4: Test methods for durability

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Installation of sprinklers under test

5 Measurements

5.1 Accuracy of measurements
5.2 Pressure measurement

6 Test conditions

7 Tests to be performed before durability test

7.1 Resistance to hydrostatic pressure at ambient temperature
7.1.1 General
7.1.2 Metal sprinklers
7.1.3 Plastic sprinklers
7.1.4 Requirements
7.2 Water tightness
7.3 Flow rate as a function of inlet pressure
7.3.1 General
7.3.2 Test method
7.3.3 Non-regulated sprinklers
7.3.4 Regulated sprinklers
7.4 Trajectory height
7.5 Radius of throw and water distribution curve
7.6 Uniformity of rotation (for rotating sprinklers intended to rotate in a uniform manner)

8 Operating time of durability test

9 Examination of sprinkler after durability test

9.1 General
9.2 Construction of sprinkler and its parts
9.3 Resistance to hydrostatic pressure at ambient temperature
9.4 Flow rate as a function of inlet pressure
9.5 Trajectory height
9.6 Radius of throw water and distribution curve
9.7 Uniformity of rotation
9.8 Distribution characteristics
