ISO 5815-1:2019 (E)

Water quality — Determination of biochemical oxygen demand after n days (BODn) — Part 1: Dilution and seeding method with allylthiourea addition

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Reagents

6 Apparatus

7 Sampling and preservation

8 Interferences

- 8.1 General
- 8.2 Presence of free and/or combined chlorine
- 8.3 Presence of algae
- 8.4 Presence of peroxides and peroxide compounds

9 Procedure

- 9.1 General
- 9.2 Pretreatment
- 9.2.1 Neutralization of the sample
- 9.2.2 Homogenization
- 9.3 Preparation of test solutions
- 9.4 Calculation of dilutions
- 9.4.1 Empirical determination of the dilutions
- 9.4.2 Determination of dilutions via the factors R of the TOC, the permanganate index or the COD
- 9.4.3 Calculation of dilution stages via the COD
- 9.5 Blank value determination
- 9.6 Determination of dissolved oxygen
- 9.6.1 Measurement of dissolved oxygen using iodometric method (in accordance with ISO 5813)
- 9.6.2 Measurement of dissolved oxygen using probes (in accordance with ISO 5814 or ISO 17289)
- 9.7 Control analysis

10 Calculation and indication of the results

- 10.1 Examination of test solutions for valid oxygen consumption during test
- 10.2 Calculation of biochemical oxygen demand after n days (BODn)
- 10.3 Validity criteria

11 Test report

Annex A (normative) Influence of incubation periods and temperatures

Annex B (informative) Multitesting

Annex C (informative) Direct seeding of the analysis batches

Annex D (informative) Performance data

Page count: 22
