ISO 16751:2020 (E)

Soil quality — Environmental availability of non-polar organic compounds — Determination of the potentially bioavailable fraction and the non-bioavailable fraction using a strong adsorbent or complexing agent

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Reagents

6 Apparatus

7 Procedure

- 7.1 Sample preparation
- 7.2 Determining water content
- 7.3 Method A: Cyclodextrin
- 7.3.1 Extraction of the sample
- 7.3.2 Phase separation
- 7.3.3 Extraction from receiver phase
- 7.4 Method B: Tenax®
- 7.4.1 Extraction of the sample
- 7.4.2 Phase separation
- 7.4.2.1 Separation funnel
- 7.4.2.2 Centrifuge tube
- 7.4.3 Extraction from receiver phase
- 7.5 Measurement
- 7.5.1 Potential bioavailable fraction
- 7.5.2 Non-bioavailable fraction
- 7.6 Blank test

8 Calculation

- 8.1 Potential bioavailable fraction
- 8.2 Non-bioavailable fraction

9 Expression of results

10 Validation

11 Test report

Annex A (informative) Preparation and regeneration of Tenax®

- A.1 Preparation of new Tenax® before use
- A.2 Regeneration of Tenax®

Annex B (informative) Illustrations

- B.1 Method B: Tenax®, using a separation funnel
- B.2 Method B: Tenax®, using a centrifuge tube

Annex C (informative) Validation study results

C.1 Introduction
C.2 Intralaboratory validation
C.3 Interlaboratory validation
C.3.1 Test details
C.3.2 Results on PAHs
C.3.3 Results on PCBs
