ISO 15886-2:2021 (E)

Agricultural irrigation equipment — Sprinklers — Part 2: Design and operation requirements

Contents

Foreword

1 Scope

2 Normative reference

3 Terms and definitions

4 General requirements

4.1 Materials
4.2 Manufacture and installation
4.3 Connections
4.4 Performance requirements

5 General test conditions

5.1 Accuracy of measuring devices
5.2 Test pressure
5.3 Test liquid
5.4 Atmospheric conditions

6 Strength tests

6.1 Construction and parts test
6.2 Resistance of threaded connections test
6.2.1 Threaded connections to riser
6.2.2 Nozzle threads intended for threaded connection
6.3 Resistance to hydrostatic pressure at ambient temperature test
6.3.1 General
6.3.2 Metal sprinklers
6.3.3 Plastics sprinklers
6.4 Resistance to hydrostatic pressure at high temperature test
6.5 Watertightness test

7 Operating tests

7.1 General
7.2 Installation of sprinklers under test
7.3 Rotation speed uniformity test
7.4 Flow rate uniformity test
7.5 Distribution characteristics test
7.6 Radius of throw test
7.7 Trajectory height test
7.8 Flow rate as a function of inlet pressure test
7.9 Range of working pressure test

8 Durability tests

9 Identification and marking

9.1 Sprinklers
9.2 Nozzles

10 Data to be supplied by the manufacturer

10.1 General data
10.2 Operating and performance data

Annex A (informative) Drop size test

A.1 Overview
A.2 Apparatus
A.3 Procedure
A.4 Data processing
A.5 Expression of results
