

DIN EN ISO 10872:2021-12 (E)

Water and soil quality - Determination of the toxic effect of sediment and soil samples on growth, fertility and reproduction of *Caenorhabditis elegans* (Nematoda) (ISO 10872:2020)

Contents		Page
European foreword		3
Foreword		4
Introduction		5
1 Scope		6
2 Normative references		6
3 Terms and definitions		6
4 Principle		7
5 Reagents and media		8
6 Apparatus		10
7 Reference substance		11
8 Organisms		12
8.1 Test organism		12
8.2 Food organism		12
9 Stock- and pre-cultures		12
9.1 Stock cultures		12
9.1.1 <i>Caenorhabditis elegans</i>		12
9.1.2 <i>Escherichia coli</i>		12
9.2 Pre-culture		13
10 Procedure		13
10.1 Preparation of food medium		13
10.2 Preparation of test material and controls		13
10.2.1 Soil		13
10.2.2 Sediment		14
10.2.3 Pore water, elutriate, extract		14
10.2.4 Solution of reference substance		14
10.3 Test		15
10.4 Nematode separation		15
10.5 Measurements and calculations		15
10.5.1 Recovery		15
10.5.2 Males		15
10.5.3 Growth and fertility		16
10.5.4 Reproduction		16
10.6 Timetable of the test		17
11 Validity criteria		18
12 Expression of results		18
13 Test report		19
Annex A (informative) Determination of maximal water holding capacity (WHC_{max})		20
Annex B (informative) Figures and photos of adult worms <i>C. elegans</i>		21
Annex C (informative) Micropipette method (10.3)		23
Annex D (informative) Performance data		24
Bibliography		27
