

ISO 4723:2023-11 (E)

Water quality - Actinium-227 - Test method using alpha-spectrometry

Contents		Page
	Foreword.....	iv
	Introduction.....	v
1	Scope	1
2	Normative references	1
3	Terms, definitions and symbols	2
	3.1 Terms and definitions.....	2
	3.2 Symbols.....	2
4	Principle	4
5	Sampling, handling and storage	5
6	Reagents and apparatus	5
	6.1 Reagents.....	5
	6.2 Apparatus.....	6
7	Procedure	7
	7.1 Sample preparation.....	7
	7.2 Coprecipitation.....	7
	7.3 Purification.....	8
	7.4 Thin layer source preparation.....	8
	7.5 Measurement.....	8
8	Quality assurance and quality control program	8
	8.1 General.....	8
	8.2 Variables that can influence the measurement.....	8
	8.3 Instrument verification.....	8
	8.4 Contamination.....	9
	8.5 Interference control.....	9
	8.6 Method verification.....	9
	8.7 Demonstration of analyst capability.....	9
9	Expression of results	9
	9.1 General.....	9
	9.2 Tracer activity added.....	9
	9.3 Count rate and net count rate.....	10
	9.4 Total recovery.....	10
	9.5 Activity concentration of ^{227}Ac in the sample.....	10
	9.5.1 Direct measurement of ^{227}Ac	10
	9.5.2 Indirect measurement of ^{227}Ac via ^{215}Po peak after an ingrowth period.....	11
	9.6 Combined uncertainties.....	13
	9.7 Decision threshold.....	13
	9.8 Detection limit.....	14
	9.9 Probabilistically symmetric coverage interval.....	14
	9.9.1 Limits of the probabilistically symmetric coverage interval.....	14
	9.9.2 The shortest coverage interval.....	15
10	Test report	15
	Annex A (informative) Potential radioactive interferences and examples of alpha spectrum	17
	Annex B (normative) Preparation of alpha source by electrodeposition	20
	Annex C (normative) Preparation of alpha source by lanthanide fluoride micro-precipitation	23
	Bibliography	25
