ISO 24384:2024-02 (E)

Water quality - Determination of chromium(VI) and chromium(III) in water - Method using liquid chromatography with inductively coupled plasma mass spectrometry (LC-ICP-MS) after chelating pretreatment

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Principle 1

5 Interferences 2
5.1 General 2
5.2 Samples 2
5.3 Sample storage and sample preparation 2
5.4 Chelating pretreatment 2
5.5 LC-ICP-MS measurements 2

6 Reagents and standards 3

7 Apparatus 5

8 Sampling, preservation and storage of samples 6

9 Procedure 7
9.1 Sample preparation 7
9.1.1 pH-adjustment of water sample 7
9.1.2 Chelating pretreatment 7
9.2 Optimization of operating condition for LC-ICP-MS 7
9.3 Identification of Cr(VI) and Cr(III) on LC-ICP-MS 8
9.4 Blank value measurements 8

10 Calibration 8
10.1 General requirements 8
10.2 Calibration covering the total procedure 9
10.3 Recovery test of target substances 10

11 Calculation 10
11.1 Use of the calibration curve to determine the result 10
11.2 Calculation of results after calibration 10
11.3 Treatment of results lying outside the calibration range 11

12 Expression of results 11

13 Test report 11

Annex A (informative) Example of an operating condition of LC-ICP-MS and chromatogram of Cr(VI) and Cr(III) in the case of PDCA-chelating pretreatment 12

Annex B (informative) Example of operating condition of LC-ICP-MS and chromatograms of Cr(VI) and Cr(III) in the case of EDTA-chelating pretreatment 14

Annex C (informative) Performance data 16

Bibliography 18
